

Name: Prerna Peswani
Class: D20B
Department: INFT
CGPI: 8.52
Job Offered: Yes
Role Offered: ASE
Job Location: Not Specified
Email: prerna@peswani.com
Contact Number: 7045044646

The selection procedure was organised into four separate rounds. The first of these rounds consisted of an aptitude test, while the second round was a coding assessment. In the third round, the candidates were evaluated through a Verbal Communication Assessment test. The fourth and concluding round was a virtual interview.

Aptitude Test and Coding assessment:

The test was well-structured into clearly defined sections, with most questions in each section being easy and a few being moderately difficult. The aptitude test lasted for 90 minutes, and candidates were expected to answer 90 questions in total, without any specific time limit set for each section.

The assessment is structured into four sections

- **The English and Verbal section:** It focused on paragraphs, synonyms, antonyms, comprehension reading, plural nouns, odd one out, and one-word substitution, etc.
- **The Logical Reasoning section:** It evaluates your skills in coding-decoding, statement, argument, syllogism, cause and effect, Venn diagram-based questions, and next number in series type, etc.
- **The Quants section:** It assesses your knowledge of profit and loss, height and direction, work and time, trigonometry, simple and compound interest, and percentage, etc.
- **The Technical section:** The section covers topics such as pseudocode and output-type questions using the C language, functions, and pre and post-increment/decrement, etc.

The results of the aptitude are known in 5-10 minutes. The coding assessment begins immediately only after clearing the aptitude test

Verbal communication assessment:

The Verbal Communication Assessment primarily focuses on assessing your ability to use appropriate grammar, vocabulary, and sentence structures while communicating in English.

The assessment may include tasks such as listening to the audio recording and answering the questions, listening to a passage and recalling it, reading the sentences or paragraphs displayed, etc.

Note:

- 1) Since this round requires you to speak, ensure that you are sitting in a quiet environment so that your answers are clear and proper without any background noise.
- 2) It is recommended to use earphones during the test to hear the voice clearly and provide accurate answers. Additionally, make sure that the earphones have a good quality microphone to ensure effective communication.

Interview:

The interview round mainly revolved around my resume, so it's important to be well-prepared in that regard. The interview started with the interviewer asking to introduce myself, followed by questions related to my resume, and some basic HR questions.

27 students were shortlisted for Accenture from VESIT
