

Name: Abhishek Chary

Class: D20B

Company: Barclays

Package: Total Fixed Pay – INR 11.67 LPA + 1 Lac Bursary = 12.67 Lacs

Job offered: Yes

Job Location: Pune and Chennai

Eligible branches: CMPN, INFT

Eligibility :- CS & IT students from Final year, with $\geq 60\%$ score across class X, XII/Diploma

and engineering semesters(all semesters) with no live KTs.

Compensation & Benefits are as follows:

Total Fixed Pay – INR 11.67 LPA + 1 Lac Bursary = 12.67 Lacs, over and above this, Discretionary Annual Bonus.

Relocation Benefits:

- One way travel to joining location, with two weeks accommodation
- One month basic salary as one time relocation allowance
- Relocation Eligibility: Permanent address outside joining location.
- Free company transport for commuting to work.
- Performance, Learning and Training resources.
- Insurance cover through Employee Mediclaim policy.

Rounds: -

1. Technical MCQs + Coding

2. Technical + HR interview

Round 1 :- Technical MCQs + Coding

The test consists of technical aptitude and coding questions (30 mcqs + 2 coding questions).

It was conducted on HackerEarth Platform. The difficulty level of questions varied from

Medium to Hard level. +4 or +6 marks were given to MCQs based on their difficulty level.

We were able to switch from one question to another. The questions were asked from :

- C++
- Java
- Python
- JavaScript
- SQL
- MongoDB
- Servlet
- OS

Coding Questions:

Que 1) 50 Marks

Consider a part of the positive number line starting at 0 and ending at 10^9 . You start at 0. There are N tasks that you can perform.

The i^{th} task is located at point l_i (integer) and requires time t_i (integer) to be performed. To perform the i^{th} task you have to reach the point l_i and spend time t_i at that location.

It takes one second to travel one unit on the path i.e going from 1 to 3 will take $(3 - 1) * 1 = 2$ seconds.

You are given T seconds of time, in this time you have to perform as many tasks as you can AND return to the start position.

Find the maximum number of tasks you can perform in time T.

Que 2) 20 Marks

Find the node 20 marks

Given a graph G with N nodes and an array B of size N. Each node has exactly one outgoing node edge from it. Each element in array B represents a directed edge from node i to node $B[i]$.

You need to find a path such that maximum nodes can be covered from the starting point. Print the index of the starting node. If there is more than one solution, print the one with the smallest index.

Try to pass all test cases of at least one question and a few test cases of the other.

MCQs are the deciding factor for this test. Make sure to attempt all of them correctly.

Round 2. Technical + HR interview

It was a tech+HR round. Mine was scheduled at 10 30 am to 11 00. But as soon as I joined due to some reasons my audio was not working .We tried for over 15 minutes

but nothing worked .(So please make sure you check your devices before joining and should be familiar with the platform (MS teams).In my case the interviewer was very kind and she understood my situation). As a last resort she told me that she would call me and then we had our interview over the phone. She told me she barely had 15 minutes for the interview as her next interview was scheduled at 11 o'clock .So our interview started with the most basic question i.e “Tell me about yourself ? “, so prepare these types of questions beforehand. She then proceeded towards my projects and internships . After explaining all the projects and internship, she asked me some HR questions like, “How would you resolve conflict or difference of opinion with your teammates in your group ?”. Next was given a hypothetical situation you have been assigned as a leader in an organisation but they don't like you. How will you handle them? etc .After that some basic questions about mongoDB and SQL,Java ,python. Most of the interview was resume-based so prepare yourself accordingly.

So that's how my interview ended. She was quite understanding and very friendly. That's what made me comfortable after such a tragic experience in the first 15 minutes. So don't panic in such a situation. I was calm and we were enjoying our conversation.The key here is to build good rapport with your interviewer , I think that's what she liked ,the way I handled the situation. All the best for Barclays. If you have any doubt feel free to contact me.
