

Name: Anurag Thakur

Class: D20B

Company: Barclays

Package: Total Fixed Pay – INR 11.67 LPA + 1 Lac Bursary = 12.67 Lacs

Job offered: Yes

Job Location: Pune or Chennai

Eligibility Criteria: - CS & IT students from Final Year with $\geq 60\%$ score across class X, XII/Diploma and engineering semesters (all semesters) with no live KTs.

Rounds: -

1. Technical MCQs + Coding
2. Technical + HR interview

Round 1: -

The test consists of technical aptitude and coding questions (30 MCQs + 2 coding questions). It was conducted on HackerEarth Platform. The difficulty level of questions varied from Medium to Hard level. +4 or +6 marks were given to MCQs based on their difficulty level. We were able to switch from one question to another. The questions were asked from :

- C++
- Java
- Python
- JavaScript
- SQL
- MongoDB
- Servlet
- Spark SQL

The test started with questions based on c++ OOP concepts, I had 6-7 oop questions where you are supposed to find outputs of the code sample

Python questions were easy pandas data manipulation and a one on python lists

I had a few java questions on OOP but a lot of questions on servlets (6-7)(prepare for java servlet properly)

Only one output based javascript question

2 SQL queries

And 2 queries on spark SQL (the syntax is a little different so do check it before appearing for the test)

They have a set of questions which are shuffled for every student and the same questions are asked in every college. Ask your friends from other colleges for the questions, a friend from Thadomal college shared his questions and 3 questions I had were same

MCQs are the deciding factor for this test make sure to attempt all of them correctly because I could only solve one coding question with all the test cases and still got selected

Coding Questions:

Go through the coding ninjas barclays questions first they have a page for company specific questions

1. The Largest Prime Number Possible from a Subsequence of a Binary String

I don't remember the second question exactly but it was on dynamic programming

Try to clear all the test cases of one question and a few for the other

Round 2 (Technical + HR Interview): -

The interview was conducted on Teams and was both technical and HR interview. Interviews started at 6:30 AM. My interview was scheduled at 10:30 and it lasted for 40 mins.

The interview was easy as most of them are VPs. You'll get the name 2-3 days prior so search about them on linked in. This actually varied though as some people were asked really complex questions (file compression in java) but some were only asked HR questions

Questions:

1. Introduce yourself.
2. About my internship and what kind of projects I have worked on other than college and college projects.(try to give a detailed overview which explains where you have used which libraries)
3. Then he asked me to present my screen and use any language I was comfortable with and asked me if I had a stationary object lying around, I answered a pen so he asked me to make a class pen and make different variables and methods for that pen (make sure to use access modifiers for variables and try to make the code clean)
4. He then asked me it more abstract so that it can be inherited easily by other classes
5. Then he asked me to write a function to multiply a number with using the * operator
6. Then he asked me to explain one of my machine learning projects in depth so I first gave an overview and then explained all the important features, which algorithms I used and

why I used them. Then I suggested that I will be able to explain it better visually and asked to enable my phone camera for explaining the algorithm to which he agreed(My interviewer had a few posts about data viz and ML on his linkedin so I thought that he will be more satisfied this way) and I explained him 2 algorithms visually using pen and paper (Statquest videos came in clutch)

I wasn't asked any other HR questions but be prepared for HR questions as a lot of my friends were only asked HR questions.

He then asked me if I had any questions for which I had 3 questions pre planned. One on their market conditions as they had recently released their quarterly results, second on their environmental events and last one was a basic tech stack and training related question

(Important TIP: go through all of their websites barclaycard, investment banking, etc and try to come up with unique questions which you'll ask the interviewer spend at least a day or half on this you should remember every important aspect from the founders to the current CEO, follow this for every company)

The interview was super easy for everyone and because of that no one felt satisfied if their interview was good or bad.

Focus on the 1st test it is the most important round.

(Another TIP: read all the placement experiences from geeks for geeks archive and by all I mean start from the very first experience this has helped me a lot and will surely help you in this or any other interview. Make sure to search for the gfg archives of all the companies)

Just keep your head up you will surely get something good, cheers
