

Name: Jatin Gogia

Class: D20B

Company: Barclays

Package: Total Fixed Pay – INR 11.67 LPA + 1 Lac Bursary = 12.67 Lacs

Job offered: Yes

Job Location: Pune or Chennai

Eligibility Criteria: - CS & IT students from Final Year with $\geq 60\%$ score across class 10th ,12th/Diploma and engineering semesters (all semesters) with no live KTs.

Rounds: -

1. Technical MCQs + Coding
2. Technical + HR interview

Round 1: -

The test consists of **technical aptitude** and **coding** questions (**30 mcqs + 2 coding questions**). It was conducted on HackerEarth Platform. **+4 or +6 marks** were given to MCQs based on their difficulty level. The difficulty level of questions varied from Medium to Hard level. The questions were asked from

- C++
- Java
- Python
- JavaScript
- SQL
- MongoDB
- Servlet
- OS

C++ java questions were mostly based on oops so try to practise the oops concepts and **python** questions was mostly based on exception handling.

In **SQL Mongodb** questions you are expected to select the **appropriate Queries** and some of them were theory based also.

C++ java python sql questions were from easy to medium range.

For the **javascript** questions html code was given and we have to predict the output.

There were 2 coding questions one for 20M with easy to medium difficulty level other was for 50M for medium to high difficulty level.

First question for 20M was to check whether the given binary string is valid or not based on some conditions given. I don't exactly remember the conditions . But this was an easy question and all my test cases were passed for this question.

The second question for 50M was like, a function was given which needs to be performed on every element of an array (only if possible) then return the minimum sum. If operations could not be performed then return the minimum element of an array.

The question was lengthy and I took a lot of time to understand the question. According to me it was from medium difficulty level. In this question I tried the brute force approach and 8 out of 14 test cases passed.

Round 2 (Technical + HR Interview): -

The interviews were conducted on Teams and the interviews started from morning 6:30 AM. My interview was conducted at 6 pm .

My Interviewer was mostly from non tech background (based on LinkedIn) so he didn't ask me any technical questions. My Interview started with questions like

1. Introduce yourself.
2. Explain your projects and internship as I have done an internship he asked what was your role and experience in the internship and what was your learnings from the internship. On projects he asked me if the projects were group projects or individual projects and something related to projects.
3. The next question was how you will manage the team if someone in your group is not contributing and how you will manage the difference of opinion in the team.
4. The next question was a basic question about what is the difference between data and information and how do you start building a new project.
5. In which skill you are well acquainted with and are you ready to work on different technologies apart from the skills mentioned in the resume and are you willing to learn new technologies and skills?
- 6 In the end he asked me if I am willing to relocate to Chennai or not and what is my first preference, Pune or Chennai?
- 7 In the end he asked me if I had any questions?.What extra skills we must gain before joining and what kind of techstack barclays mainly focuses on.

(**TIP:** Always ask some questions and don't ask immature questions, only ask professional questions related to work , company, role , tech stack etc...)

My interview lasted for about 15 mins as the interviewer had another interview after my interview. The questions were almost from a non-tech background in my case but it varied from interviewer to interviewer. For some of my friends the interviewer asked to share the screen and write the code to delete an element from the doubly linked list.

TIPS:

Try to clear the first round, if you cleared the first round 75-80% chances to get placed in this company rest depends on your interviewer.

Try to focus mainly on MCQ'S if your all MCQ'S are correct and 1st coding Questions's 100 % test cases and 2nd coding question's even some test cases you passed then also chances of getting shortlisted its all about your score MCQ's contain different weightage (some contain 2m some contain 4 or 6 mostly the ones with output guess or error guess were of 6m weightage) and 1 coding of 20m and one of 50m so plan accordingly and achieve high possible scores

Finally 34 students were selected (14 from INFT and 20 from CS)

******* ALL THE BEST *******
