

Name: Rohit Karalkar
Department: INFT
CGPI: 9.59 (Up to 6th Semester)
Company: Barclays
Company status: Dream
CTC: 12.67 Lacs
Job role: BA3 Graduate
Job location: Pune and Chennai
Job Offered: Yes

Eligible branches: CMPN, INFT

CS & IT students from Final year, with $\geq 60\%$ **score** across class X, XII/Diploma and engineering semesters (all semesters) with no live KTs.

Compensation & Benefits are as follows:

Total Fixed Pay – INR 11.67 LPA + 1 Lac Bursary = 12.67 Lacs, over and above this, Discretionary Annual Bonus.

Relocation Benefits:

- One way travel to joining location, with two weeks accommodation
- One-month basic salary as one time relocation allowance
- Relocation Eligibility: Permanent address outside joining location.
- Free company transport for commuting to work.
- Performance, Learning and Training resources.
- Insurance cover through Employee Mediclaim policy.

Total eligible participants were around **250+** but only **64** of them were shortlisted for the Technical + coding test round out of which **34** were placed (14 from IT, 20 from CS).

Total Rounds: 2

- 1) Online Technical MCQ's + Coding round
- 2) Technical + HR Interview

Dates of rounds:

Last Year (2021), Barclays came around **1st week of October** and this time it came in **mid of July**. So be prepared and keep track of it.

Google Forms were released on **15th July 2022**

Pre-Placement Talk on **28th July 2022**

Round 1: 29th July 2022

Results of Round 1 were announced on 4th of August, followed on which everyone was made to upload their resumes on Google Drive which respective panels were then making use for interviewing candidates.

Round 2: 16th August

Results: 17th August

Detailed Description of Rounds:

1) Round 1:

This round was a test of 90 mins on the Hacker Earth platform which consisted of 2 Sections: **Technical MCQs followed by 2 Coding questions.**

Total 30 MCQs of medium level difficulty having either **+4** or **+6** marks weightage (**no negative marking**).

The MCQ section was a little time consuming and there were a lot of Output-based MCQs in it. Everyone were having different set of questions of which in MCQ domain I came across **C, C++, Java, Python, Javascript, MongoDB.**

Normally, the concepts which you should be well versed are as follows:

- OOPs
- C++ / C
- JavaScript
- MongoDB
- Servlets
- Java
- Python
- OS
- DBMS (SQL)

I attempted **28/30** questions of MCQs and then it was time's up. Try to attempt all MCQs as there are no negative marking.

Round 1 also had 2 coding questions:

Q1) Minimum sum of an array:

20 marks

My first question was to find the minimum sum of given array. But there was some tricky different conditions for positive and negative numbers. But this was an easy question and all.

All the test cases **(11/11)** were passed in it.

Q2) Maximum prime:

50 marks

Given a Binary string, the task is to find the largest Prime Number possible by the decimal representation of a subsequence of the given binary string. If no prime number can be obtained, print **-1**.

Examples:

Input: S = "1001"

Output: 5

Explanation: Out of all sub sequences of the string "1001", the largest prime number that can be obtained is "101" (= 5).

Input: "1011"

Output: 11

Explanation: Out of all sub sequences of the string "1011", the largest prime number that can be obtained is "1011" (= 11).

I tried to solve this question for the very first and around **6/10** test cases were accepted.

- Try to pass all test cases of at least one question (preferably 50m one) and a few test cases of the other.

2) Round 2:

Platform: MS Teams

Date: 16th August 2022

Round 2 consists of an online interview on Microsoft teams. The interview usually lasts about 25 mins. A Panelist interviews about 4-5 candidates and there were 7-8 panels accordingly. Make sure you research about your interviewer on LinkedIn. If the interviewer is from a non-tech background, then there is a strong possibility that the interview will lean more towards HR based questions. **However, it is advised to be prepared for both tech and hr.**

My interview was mostly HR based. Interview started with a brief introduction of the interviewer followed by an ice break question. Next, he asked me to introduce myself, and reviewed my CV. He then asked me about my recent projects and whether it was a group project or an individual one. And he asked me more in-depth questions about the project, the team contributions and how the team was managed.

He also asked me to define

- What are objects in Java, how you will create it?
- What is the difference between C/C++. Also asked me regarding SDLC and its phases.
- What OOPs concept you used in your project?
- What do you know about Barclays and what it works for?
- What Technology stack would you like to work with in Barclays?
- Is it fine for you if you're relocated to Chennai Branch?
- Also, a scenario-based question was asked, if I was a Project Manager of a team and you want to deliver a product to the customer after three months, and by the very end of two months you came to know that two of the female team members are not working and contributing up to the mark, then as a Project Manager, what actions will you take?

[Barclays Sample Interview Experience](#) are here which you can go through. The Interview thus lasted for about 25 mins and the very next day, the results were announced.

Tips:

1. **Pre-Placement talk is very important.** Make sure you attend it and make notes about the company.
2. Resume should be made thoroughly. **Never put anything in the resume that you aren't confident with.**
3. [Barclays](#) emphasizes on **RISES** their five Values – Respect, Integrity, Service, Excellence and Stewardship. Usually, situational based questions are asked where you are given a situation and answer them keeping RISES values in mind.

Feel free to connect for any queries,

BEST OF LUCK
