

Name: Surendra Totre

Class: D20B

Company: Barclays

Package: Total Fixed Pay – INR 11.67 LPA + 1 Lac Bursary = 12.67 Lacs

Job offered: Yes

Job Location: Pune and Chennai

Eligibility Criteria: - CS & IT students from Final Year with $\geq 60\%$ score across class X, XII/Diploma and engineering semesters (all semesters) with no live KT's.

Rounds: -

1. Technical MCQs + Coding
2. Technical + HR interview

Round 1: -

The test consists of technical aptitude and coding questions (30 mcqs + 2 coding questions). It was conducted on HackerEarth Platform. The difficulty level of questions varied from Medium to Hard level. +4 or +6 marks were given to MCQs based on their difficulty level. We were able to switch from one question to another. The questions were asked from :

- C++
- Java
- Python
- JavaScript
- SQL
- MongoDB
- Servlet
- OS

Most of the questions in C++, Java were related to OOPs, Exception Handling, Data structures and output findings which was tricky.

Python questions were mostly based on data analysis (pandas and numpy).

Questions from SQL and MongoDB were easy and medium level like basic concepts, output of given query, find alternate query, etc.

For Coding, two questions were asked in which one was easy/Medium (20 Marks) and other was medium/hard level (50 Marks).

My first question was to find the minimum sum of given array. But there was some tricky different conditions for positive and negative numbers. But this was an easy question and all my test cases were passed for this question.

I don't remember the second question but it was based on graph. Here some of the test cases were not passed so it was partially accepted.

Round 2 (Technical + HR Interview): -

The interview was conducted on Teams and was both technical and HR interview. Interviews started from morning 6:30 AM. My interview was conducted around 2 pm. My Interviewer was mostly from non tech background (searched it on LinkedIn) so he didn't ask me any technical questions. My Interview started with questions like

1. Introduce yourself.
2. Explain your projects and internship as I have done an internship he asked what was your role and experience in the internship and what was your learnings from the internship. On projects he asked me if the projects were group projects or individual projects , my contribution to the project etc.
3. In which skill you are well acquainted with and are you ready to work on different technologies apart from the skills mentioned in resume.
4. The next question was a basic question about what is the difference between data and information and how do you start building a new project.
5. The next question was how you will manage the team if someone in your group is not contributing and how you will manage the difference of opinion in the team.
6. He asked me situation based questions on RISES(Respect, Integrity, Service, Excellence and Stewardship) which are Barclays values.
7. Basic interview questions like your strengths, weaknesses, future career plans, etc.
8. In the end he asked me if I am willing to relocate to Chennai or not and what is my first preference, Pune or Chennai?

Then Interviewer asked me if I have any questions so I asked him questions related to the company, what kind of tech stack Barclays mainly focuses on and then my interview was over. My Interview last for around 20-25 minutes.

Finally 34 students were selected (14 from INFT and 20 from CS)

Tips: -

- If you want to get placed in this company, just try to clear the 1st round which is very important. Go through the topics mentioned above in Round 1. If you are able to solve one coding question completely and pass some test cases of the other question with a good amount of MCQs, you will be able to clear this round.

- If you clear the 1st round there is 80% likely chance to be get placed in this company. Rest 20% totally depends on the Interviewer.
- Go through all the skills, projects, internships mentioned in resume. If Interviewer allotted is from tech background, then he/she will definitely ask questions from the skills mentioned in resume also questions related to Java oops (coding + theory). So be prepared and try to include the skills you know and projects you worked on.
- If Interviewer allotted is from non tech background, then you can expect questions from the projects and internships mentioned in resume along with some HR questions.
- While giving the answers of HR questions try to relate with examples including the RISES values.
- Barclays emphasize on RISES (**R**espect, **I**ntegrity, **S**ervice, **E**xcellence, **S**tewardship) which is very important to consider these values while giving the answers in HR questions.
- You can find more info about RISES from [here](#)
