**Total Rounds: 2**

1)Online Technical MCQ's + Coding round

2)Technical + HR Interview

**Dates of rounds:**

Pre-Placement Talk on 28<sup>th</sup> July 2022

Round 1: 29th July 2022

Round 2: 16th August

Results: 17th August

Total        eligible participants applied but only **64** of them were shortlisted for the Technical + coding test round out of which **34** were placed.

## Test details

- Opens at: 29 Jul, 2022 (Friday) | 7:30p.m.
- Closes at: Jul 29, 2022 08:00 PM IST
- Test Duration: 1 hrs 30 mins

## Important

- You can take this test anytime between the start date/time and end date/time.
- Once the test starts, you cannot pause it. The test will run continuously for 1 hrs 30 mins.

## Before you begin

*Before you take the Barclays GSC - 2022-2023 Set 3, we recommend that you take the practice test a few days before the actual test.*

### *Advantages of taking the practice test*

- You get familiar with the HackerEarth Recruit platform including the proctoring settings. The actual test may have fewer restrictions than the practice test. This advanced familiarity will enable you to solve problems more efficiently during the actual test.
- An automatic system-compatibility check is performed before you start the test. If your system isn't compatible, you must make the required changes before you take the actual test.

## 1) Round 1:

This round was a test of 90 mins on the HackerEarth platform which consisted of 2 Sections- Technical MCQs and Coding.

Total 30 MCQs of medium level difficulty having either 4 or 6 marks weightage. The MCQ section was a little time consuming and there were a lot of Output-based MCQs on C++, Java, JavaScript and Python.

The MCQs were based on:

- OOPs
- C++ / C
- JavaScript
- MongoDB
- Servlets
- Java
- Python
- OS
- DBMS (SQL)

Round 1 also had 2 coding questions:

**Q1) Maximum prime:**

*50 marks*

You are given a binary string, the subsequences of this string can be converted to numbers. Find the maximum prime number of these numbers.

Ex: Binary string = "1011", Maximum prime number among the subsequence is "111" which is equal to 7.

**Q2) Find the node**

*20 marks*

Given a graph G with N nodes and an array B of size N. Each node has exactly one outgoing node edge from it. Each element in array B represents a directed edge from node i to node B[i].

You need to find a path such that maximum nodes can be covered from the starting point. Print the index of the starting node. If there is more than one solution, print the one with the smallest index.

Try to pass all test cases of at least one question (preferably 50m one) and a few test cases of the other.

Overall, in round 1 it is important to keep the test time in mind while solving the questions. MCQs have more weightage than coding questions but in order to clear this round you need to solve both sections.

**1) Round 2:**

Platform: MS Teams

Date: 16<sup>th</sup> August 2022

Round 2 consists of an online interview on Microsoft teams. The interview usually lasts about 30 mins. A Panelist interviews about 4-5 candidates. The panelists are usually VP's at Barclays. For us, the interview was either Technical based or HR based or both Tech + HR and your interview usually depends on the background of your panelist. Hence make sure you research about your interviewer on LinkedIn. If the interviewer is from a non-tech background then there is a strong possibility that the interview will lean more towards HR based questions. **However, it is advised to be prepared for both tech and hr.**

My interview was mostly HR based. Interview started with a brief introduction of the interviewer followed by an ice break question. Next, he asked me to introduce myself, and reviewed my CV. He then asked me about my recent projects and whether it was a group project or an individual one. And he asked me more in depth questions about the project, the team contributions and how the team was managed.

He then asked me to define data, information and knowledge followed by questions like what do mean by collaboration, coordination? What does delegation mean? What do you think diversity is?

He then asked me if i was a manager of a team where one team member was useless then how would you deal with him?

Finally he asked me what tech stack i would like to work on at barclays and asked if I had any questions for him.

Tips:

1. Pre Placement talk is very important. Make sure you attend it and make notes about the company.
2. Resume should be made thoroughly. Never put anything in the resume that you aren't confident with.
3. Barclays emphasizes on RISES their five Values – Respect, Integrity, Service, Excellence and Stewardship. Usually situational based questions are asked where you are given a situation and answer them keeping RISES values in mind.
4. Work on your introduction as it leads to where your interview will go. Smartly lead the interview towards your strengths.
