

Carwale

By Bhavya Hingorani

Drive overview

Date of drive : 5th,6th and 8th August

Number of rounds : 4

Package : 9 LPA (7.5 base – 1.5 retention)

Roles : Full stack, Front end, Test automation

eligibility : BE(INFT/CMPN/EXTC/ETRX) ME and MCA, pointer 6.7, 12th 65%

Rounds overview

There were a total of 4 rounds.

1st - 6th August, online coding round.

2nd - interview round based on DSA (Online for some offline for rest)

3rd - Interview round based on System Design

4th - HR Interview

8th august

Round 1

Type: Online coding Round

No. of problems: 4

Time: 2 hrs

Problem Difficulty: Easy, Easy, Medium, Hard

Resources : Leetcode, Hackerrank, Hackerearth

Problem 1

Title: Number of characters escaped

Description: Given a string that consists of lowercase English letters and the characters '#' and '!' determine the number of times a character escaped. A character escapes if:

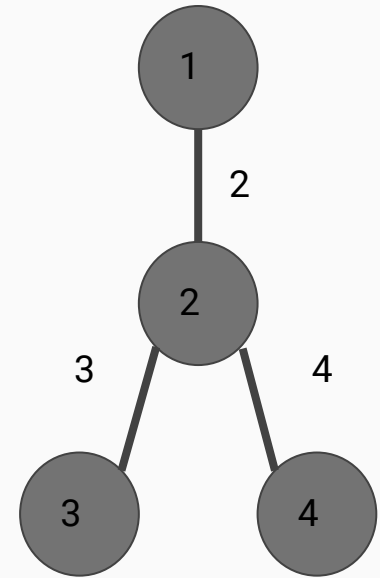

- 1) It is a lowercase English letter
- 2) There is a '!' character immediately before it
- 3) Both the letter and the '!' are between a starting and an ending '#'

Example: "#ab!c#de!f"

Problem 2

Title: Customizable tours with GoWorld

Description: Given a tree like map of tourist destinations. The nodes represents the spots and the edge between them has the weight of traversing the node a node may be traversed more than once. The total cost of traversal for a node is $W[x] * \lceil t/2 \rceil$ where $W[x]$ is the weight for node x , t is the number of times it is traversed. Find the minimum cost path from the start to the finish

Problem 3

Title: Minimum health

Description: Alex and Charlie are playing a game. The game has some number of initial enemies and one new enemy is added per level for n levels. Alex has completed the game and beaten the $rankTh$ enemy. For Charlie to win he must also beat the $rankTh$ opponent on every level. Beating an enemy decreases the health of the player by the strength of the enemy.

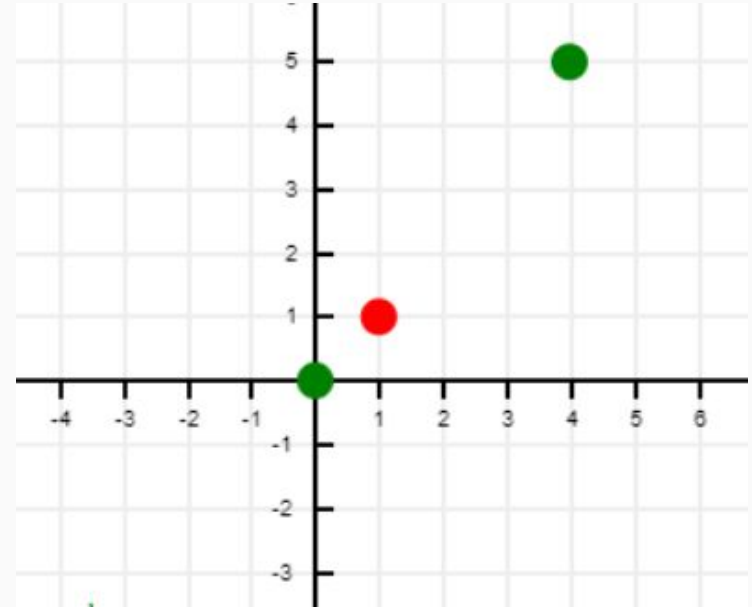

$initial_enemy = [1, 2], new_enemy = [3, 4], rank = 2$

$Total\ health = 2nd_rank([1, 2]) + 2nd_rank([1, 2, 3]) + 2nd_rank([1, 2, 3, 4]) = 1 + 2 + 3 = 6$

Problem 4

Title: Points of graph

Description: Given a graph with n number of points and a distance d . If we pick a point on the graph then all the points in the d distance of that point will be deleted and for each of the deleted points the d distance is taken again. Find the minimum number of points to be selected to delete all points on the graph

Round 2

Type: DSA Interview

No. of problems: 3

Time: 1 hr

Problem Difficulty: Easy, Medium, Medium

Problems: Buy and sell stock, Buy and sell stock(Hold at most 2 stocks), knapsack problem

Resources : Leetcode, Hackerrank, Hackerearth

Round 3

Type: System Design Interview

Time: 1 hr

Important concepts: Horizontal and vertical scaling, Load balancers, Caching, Database design and scaling

Resources : Youtube (I recommend System Design Crash Course: [link](#), can also watch Gaurav Sen for detailed understanding)

A graphic with a dark teal background featuring faint, circular icons of various tech-related items like a smartphone, a laptop, a server rack, and a house. Overlaid on this background is the text "System Design Crash Course" in a bold, sans-serif font. "System" and "Crash Course" are in yellow, while "Design" is in white.

**System Design
Crash Course**

Round 3

Questions:

- 1) Resume Project related questions
- 2) System Design for Automatic number plate recognition in India (My project)
- 3) Design tables for the application
- 4) What method will you use to store images collected from all over the country
- 5) How will your system deal with millions of users accessing it at the same time (Load Balancing and sharding)
- 6) How will you deal with servers or databases going down/crashing
- 7) what processes take place in the backend of the system when a user will claim false charges

Round 4

Type: HR interview

Time: 1 hr

Questions: Tell me about your life (1st to 10th std, 11th and 12th, JEE CET and College) talk about Academics, Friends, hobbies, etc.

Mixed with generic HR interview questions:

What do your parents do?

Strengths and weaknesses, How would your best friend describe you?

Do you plan to go for masters? etc

Thank you!
