<i>Quality Assurance (Test)</i>	<i>No Active Backlog</i>	<i>BE/B TECH</i>	<i>Computer Science ,Information Technology</i>	<i>CTC – INR 9,00,000/-per annum</i>
				<i>Internship:- Stipend Fee - 25000/-per month</i>

note: AI & DS branch students were also eligible

First of all, don't panic. Plan things correctly and it's better to discuss your placement preparation with your parents as they can guide you well. Also during those conversations, you may feel like analyzing your actions/steps toward the placement preparation.

Dates:

25/07/2023 -- Carwale online mode PPT,

26/07/2023 -- Carwale Test + Interview

The entire hiring process was over in 1 day. So get better sleep a day before it and eat something in the morning, because the day is going to be hectic.

The process can be divided into 4 rounds (1 coding + 3 interview)

Round 1: DSA round

The test consists of 4 coding questions (1 easy, 2 medium, 1 hard). Weightage will be as easy < medium < hard. The test was conducted on the Coderbyte platform. It's better to check out on which platform Carwale has conducted tests in other colleges in your respective year as they keep changing. If you solve 1 easy and 2 medium or 1 easy and 1 hard question, you will most probably be shortlisted for the next round.

Round 2: DSA + Coding interview

This round is based on DSA. The interviewer started it by asking me questions on JS and told me to code for a specific task in the Google doc. Then he moved on to DSA questions. Practicing standard questions well can help you clear this round. The interviewer then asked me to solve the question using the binary search algorithm. He then asked me to present my screen and write the code with the logic that I provided.

The resource that I followed: [Love Babbar DSA playlist](#)

Tips:

The most asked topics were Binary Search and Dynamic Programming

- Tell the solution in the order of brute force to the most optimized solution

Round 3: System design interview

The interview started with my introduction followed by system design questions. He asked me which of my projects we should discuss. Questions were like:

How will you scale this project for the entire MMR area?

What difficulties you might face in doing so? And how will you overcome them?

Design a database for the same and why would you choose a certain database over another?

What is load balancing? Caching?

If an AI model with 98% accuracy is deployed and an entire country is using it, then 2% wrong predictions would still result in bad performance and the company may lose its credibility. How will you tackle this issue?

The interviewer was helpful. So try to engage in healthy conversation, remember it's not your viva.

Tips: Resource that I followed

Round 3: HR interview

Only 5 students were shortlisted for this round. Even though this was an HR round, the interviewer mostly asked technical questions. They ask you questions that you might not be able to answer easily to see your response. They want to see your problem-solving skills and how you came up with a solution. Like other interviews, this also lasted for 1 to 1.5 hours.

In the end, He asked HR questions like

What is your dream company? Why? (note down some points during Carwale's PPT)

Tell me something about your family background.

What are your strengths and weaknesses? (Be ready with 5 for both, ahead of the interview)

Do you have any plans to go for masters? why?

Carwale used to hire 6 students for all colleges. However, due to the recession period, they hired only 3 from every college.

For any more queries, feel free to connect. Thank you for your time.

I wish you all the very best for your journey!
