

Name:Aaryan Mehta
Class:D20B
CGPI:9.83(upto6thSem)
Department:IT
Criteria:6.5+CGPIandNoActiveBacklogs
JobOffered:Yes
Profile:Analyst-Consulting
Packageoffered:7.6LPA

RecruitmentProcess

The recruitment process had 2 rounds. The first round was an aptitude test. The second round was a Technical + HR interview. Both of these rounds were conducted online. The first round consisted of quantitative, logical and verbal questions. They were pretty simple to clear. Each section had 25 questions so 35 minutes each for both Quantitative and Logical and 25 minutes for verbal were allotted. There wasn't any negative marking. We weren't allowed to change answers to the previous questions so that was a challenge.

The second round which was held around 24th August 2022, consisted of questions from my internship where I had worked upon an Oracle website. The interviewer asked me basic SQL questions like what is the referential integrity concept. Give examples of left and right joins in real life. I would suggest studying at least one real life example for every SQL query. He also asked me to explain the software development life cycle process for one of my mobile applications I had made. Make sure you have a decent amount of SQL projects in your resume. I had a couple of them and also done an internship in it.

Next the HR questions were asked in the same round. He asked me the usual HR questions like why did I want to join Deloitte or what'll you do from 5 years from now. These questions can differ from one individual to another so I suggest you to be prepared for the most common questions asked in advanced. Personally, I wasn't prepared for any of this and was able to clear both easily so don't worry too much about it. My second round lasted about 10-15 minutes. Around 65 students were placed, 13 were from INFT. The result was announced the same day in the evening.
