ROUND - 1

Aptitude Test - AMCAT Platform - 23 August, 2022 (online)

Time - 3 hrs

3 sections -

English Comprehension - easy to moderate
Logical Ability - easy to moderate
Quantitative - moderate

- Section wise test - complete one section at a time - then proceed to the next section.
- You cannot switch between questions and sections. First submit the current question, then only you can attempt the next question.

134 candidates were shortlisted for Analyst Role and 16 students for Cloud Engineering Profile.

ROUND - 2

26th August 2022

Interview(Technical + HR) 20 to 30 mins (online)

A Pre-placement talk was conducted just before the interview process for the shortlisted candidates in the morning.
(Please listen to pre placement talk properly because this might help in the HR type questions.)

The interview process started at 11 am. Mine was scheduled at 12:15am

[Tip - Just go through the LinkedIn profile of the interviewer before the interview.]

Interview time - 20-25 min

First the interviewer asked me to Introduce myself.

[Mention everything including projects, skills, tech-stack, hobbies, extracurricular activities.]

After that he asked me whether I was good with data structures.
(I knew data structures moderately).

I said yes, a little bit to avoid high level questions based on DS.

Questions asked on Data Structures -

1. Stacks (Mention everything including its operations)
2. Binary Search Tree - (how to insert a node in a BST OR count the nodes/how to know the height of a BST)

I couldn't answer the second question, so he proceeded with the next question.

Situation Based Question -

3. How can parents track the school bus in order to ensure the safety of their children?
Followed by this, he asked "How can we ensure that only the parents are tracking and no other person?"

Then he asked "Name some apps having such features."

PS: Do not forget to mention if you have used the same technology/ concept/ feature in your project too. This shows that you've practically implemented it.

Logical Puzzles -

1. A man and his wife have three sons, and each of the sons has a sister. How many members are there in the family? – 6
2. You are in a dark room with a candle, a wood stove and a gas lamp. You only have one match, so what do you light first? – Match Stick

Later on, the Interviewer asked me if I had any questions for him?

So I proceeded by asking him 2 questions which I had priorly prepared.

The interviewer seemed happy at the end of the interview.

No company oriented questions were asked to me, but be prepared for that too.

At 6 pm on the same day, the selected candidates were called on zoom and informed that we were selected.

Total students placed - 64 for Analyst and 5 for Cloud Engineering

Deloitte placement process is quite easier than some other companies so give your best shot. Maximum people got placed here. Be thorough with your resume and the projects mentioned on it.

If you have any doubts or queries, feel free to contact me.
