2

Drive Schedule: **August 18, 2022 - August 26, 2022**

Mode: **Online**

Round 1: 23th August 2021

Aptitude Test Platform: **AMCAT**

Some students received the Aptitude test link that had 3 sections -

- Verbal (25 min)
- Logical Reasoning (35 min)
- Quants (35 min)

25 questions in each section.

Some students had 4 sections -

- Verbal (15 min)
- Logical Reasoning (15 min)
- Quants (15 min)
- Coding Fundamentals (15 min)

12 questions in each section.

The test was section wise, first you have to complete the first section then you can proceed with the next section.

The questions were easy, provided you have practiced it on Indiabix, CareerRide, etc.
Out of 295 candidates 134 were shortlisted for Analyst Role and 16 for Cloud Engineering Profile.

Round 2: 26th August 2021.

Pre-placement talk for selected students was conducted at 10:00 am. I would recommend to make a note of the important aspects about the company discussed in the talk.

Shortlisted students were divided into 19 panels.

Interview(Technical+HR) 30 to 35 mins

Questions were different for different panels.

- 1) Tell me about yourself.
- 2) Details about the projects particularly about my Deep Blue Project and internships mentioned in the resume.
- 3) 4 puzzle questions (I was able to answer 3 of them correctly and had asked for hint for the last one which after discussing with the interviewer I was able to answer so my tip here is to keep on interacting with the interviewer while answering and do not hesitate to ask for hints if you get stuck)
- 4) Design an application for a hospital considering the fact that this is the only hospital in the city and you have to reduce long queues and waiting time(Here he was checking my approach. Please don't jump onto telling the solution understand the requirements first and do not assume anything. I kept interacting with him while giving him the solution. For the first time he was not at all happy with my solution but then as our discussion went on he was a kind of satisfied with it as I gave him particular reasons as to why we need a specific functionality in the application and also what not to include in the application.)
- 5) SQL query on max Salary of Emp.(Some students were asked lot of SQL queries, DBMS, Joins, etc. so I suggest you to practice them for Deloitte.)
- 6) Any questions(I asked one question)

On the same day at around 6 pm all the selected students were called on the zoom meet and told that they were selected.

The overall process was very easy and 64 students got placed for Analyst and 5 students for Cloud profile.

Also the students selected for Cloud profile had an additional GD round before the Technical+HR interview.

Note: Mention only those projects that you know thoroughly. Be Confident and Interactive.

If you have any doubts or queries, feel free to contact me.
