- B.Tech/ B.E. – Computer Science/ IT streams
- 2023 Graduates only
- No active backlogs
- Aggregate 60% or CGPA of 6.5 and above

Location: Mumbai

Role Offered: Analyst - Cloud Engineering

Recruitment Process:

Due to COVID-19, the entire process was held online.

- **Round 1:** (Aptitude Test)
Test Duration is approx : 2 hrs.
The test was conducted via AMCAT.
3 sections were there: Quantitative, Logical and Verbal.
Each section contained 25 questions.
On the SHL platform you cannot go back to attempt the previous question.
16 students made it past the first round.
- **Round 2:** (GD - Group Discussion, lasted 30 mins)
In this round, you'll be given a case study topic for which best practical Solutions need to be suggested. The topic will be presented on the screen of a zoom meeting. 5-7 minutes will be provided to prepare the pointers on which the group discussion can be done. Try to initiate the discussion provided you have a really good solution to start with. Listen to others if you prefer to add on or provide a better solution.

Our topic for this round was a case study asking for better solutions to reduce the workload on the staff for an old age home NGO tasked with taking care of their medical needs of senior citizens, with limited work force strength at a tight budget. Instead of arguing, try disagreeing with others by acknowledging their suggestions and putting forward a better solution. If at all you are supposed to be the last person to talk, try concluding the discussion with a summary of every major point discussed.

10 students were selected for the Personal Interview.

- **Round 3:** (PI - Technical + HR Interview, lasted 30 mins)
Interview was completely based on the resume and about me.
The Interviewer introduced herself and asked me to do the same at the beginning. Interviewer gave maximum importance to projects and my research work.
She asked me technical details about my 2nd year python project and my BE project. Since this was a cloud engineering related job role, she asked me about the various deployment and service models. Fundamentals of Exception Handling were asked. Asked about a situation which has impacted on me.
The interview went quite smoothly and based on her response I could ascertain to some extent that I'll be shortlisted for the next round.
6 people were selected for the interview round.
- **Round 4:** (Partner Round Interview)
A partner interview is part of the recruitment strategy for the 'Big Four' accounting firms (PwC, KPMG, Deloitte and EY), and is the last stage in the recruitment process. The purpose of the interview is to make sure the candidate is a good fit for the company. Someone from the board of directors is appointed as an Interviewer. Basic Introduction of the journey that includes schooling, junior college and degree college choices were asked. Questions related to extracurricular activities were asked. Some technical questions related to python libraries and cloud computing were asked in between the non-technical questions. "Why join Deloitte?" is the one question you can surely expect so prepare a really good answer for the same, well in advance.

Total students placed : 5 for the role Analyst-Cloud Engineering..

In case you have any doubts, please feel free to ask me.

Practice fundamentals of programming and SQL, dedicate good amount of time developing your soft skills.

Make sure that you are effectively able to explain your learnings and contributions in projects and internships respectively.

Getting placed is like a an important checkpoint in your own journey, not the finish line at the end of a race!
