

Name: Govind Tiwari

Class: D16AD

CGPI: 8.96 (up to 6th Sem)

Department: Artificial Intelligence and Data Science

Email id: 2020.govind.tiwari@ves.ac.in

Job Offered: Yes

Profile: Analyst - Consulting

Package offered: 7.6 LPA (6 fixed + 1 Signing bonus + 10%(60K) variable)

Recruitment Process

The recruitment process had 2 rounds: An aptitude test followed by a Technical+HR interview. The first round was conducted online and the second round was conducted offline.

Round 1:

The aptitude test consisted of quantitative, logical, and verbal reasoning and two coding questions.

Questions were on an easy level.

Each section was timed and cannot be revisited once submitted.

There wasn't any negative marking.

For coding questions, the first question was to find the difference between the maximum and the minimum given an array. The second question was something on a 2D array; they were for 5 and 10 marks respectively, and were given 25 minutes to solve.

(I had an experience where I was logged out of the test midway. Upon contacting the support team, I could log back into my test from the same point within 10 minutes. If you face any issues during the test, don't hesitate to reach out to them—they will surely help you out.)

64 students were shortlisted for the second round.

Round 2:

My second round started with the interviewer asking me to brief about myself while he was going through my resume.

This interviewer was only interested in asking technical questions so he jumped on to ask me about the OOPs concept.

He asked me to explain polymorphism in detail explaining method overloading and method overriding with examples. I was asked to write a function and show the

difference between overloading and overriding.

Then, he asked me to explain abstraction and abstract classes in detail. Again he was looking for a real-time example here to evaluate my understanding of the concept.

He asked me about the language I was comfortable in and then asked me to explain to him 2 coding questions using pen and paper.

1. Check if a string is palindrome.
2. Return the sum of digits of an integer.

(He went through my code quickly and didn't ask for much explanation).

(Some candidates were also asked questions on stacks, queues, and linked lists, really depending on the panel that you're allotted to, so have good luck!)

The interview ended with him asking me if I had any questions for him to which I asked about the scope of different technologies in Deloitte.

My interview lasted for about 20-25 minutes and not a single HR question was asked.

A total of 29 students were selected for Consulting Analyst role.

Some points from my side:

- There were candidates whose interviews lasted for about an hour where the interviewer went deep into the technologies mentioned in their resume, SQL, and DevOps were asked but were still not selected in the end. So, just remember, Quality over Quantity! and only mention those things in your resume that you have a good hold of and have actually done.
- There were different panels where some asked only HR questions, some asked only technical questions, and some asked a mix of both.
May the luck on that day be with you and you get allotted to the panel you desire :)
- Having completed an internship with big tech companies is not a requirement, as most companies are looking for fresh graduates. Good projects can effectively compensate for it.
- For most companies, especially Deloitte, having a good attitude and personality is just as important as possessing technical knowledge.

The recruitment process of Deloitte is one of the easiest when it comes to dream companies and with effective preparation, you can prepare for it in just 2 weeks if you have a good foundation. Keep your basics clear and explain things in an easy way to the interviewer.
