

Deloitte Placement Experience

Name - Tanvi A. Kate

Class - D16AD

Dept - Artificial Intelligence & Data Science

Email Id- 2020.tanvi.kate@ves.ac.in

Linkedin- <https://www.linkedin.com/in/tanvi-kate-70a42522b/>

CGPI(till sem 6) - 9.29

Company Name - Deloitte USI

Job Role - Consulting Analyst

Package Details - 7.6 LPA (6 fixed + 1 Signing bonus + 60K variable)

Recruitment process - <https://usrecruiting.deloitte.com/campus-hiring-e-school2>

- Registrations started from 23rd August 2023 and closed on 24th August 2023. The process was hybrid for the 2024 batch.

Round 1

(26th August 2023; online - HirePro)

Aptitude test of 90 mins conducted on HirePro platform (refer previous year questions) Total 5 sections were there-

Sections	Questions	Time (mins)
Verbal Ability	13	13
Reasoning Ability	12	12
Quantitative Ability	10	10
Technical	30	30
Coding	2	25

- The test was conducted section wise. You could switch to any question in a particular section but you can't switch between sections.
- For preparation, you can refer to [Indiabix](#) and [Preplnsta](#) and RS Aggrawal.
- questions cover topics C, C++,Java, Excel, SQL, HTML, and a few questions on MS office, Cloud Computing
- **66** candidates were shortlisted after the first round.

#NOTE: This is the round where most people are eliminated, so pay careful attention to this one. Do not take it for granted.

#TIP: The sections are timed. Which means you do not get a second to spare, right from when you press begin until you press submit. Hence, it is very important you do not slack off and maintain a steady pace throughout the test. Certain sections will be smaller and have less time dedicated to them, so pay close attention to the timer at all times.

#TIP: The verbal ability and reading comprehension section, especially the one where you have to arrange sentences in order, in my opinion, are easily overlooked while preparation. Practice

those type of question thoroughly as those will be the most challengingly mind boggling ones given the time crunch.

Pre-Placement Talk(PPT)

(1st September 2023; offline - auditorium)

- The pre- placement talk was conducted in the auditorium of our college. Unlike other companies the pre-placement talk was only conducted for the 66 shortlisted students.
- The pre-placement talk is very important for every candidate. Some of the students were asked a few questions in their interview from the PPT.
- It makes a good impression if you ask questions in the QnA part of the PPT.

Round 2

(1st September 2023; offline - 2nd floor labs)

Statistically speaking, cracking the deloitte interview is fairly easy, since you have a close to 1 in 2 chance of making it through. So it's crucial you are best prepared and leave no stone unturned.

After the PPT was over, we were asked to gather around the amphitheater and were asked to submit our hard copies of our resumes to the pcords. Then, we were randomly assigned a panel. There were about 10 panels during my time.

Depending on the interviewer in your panel, the type of questions you would be asked may vary vastly. Which is why it is crucial to prepare for the interview thoroughly, not just from a technical standpoint, but also an HR one.

Following a general interview structure, I had prepared a minute-long introduction (also called an elevator speech), which was pretty much just an overview of my resume.

#NOTE: YOU have the power to drive the interview in the direction you want during this speech. Do not just talk about general stuff, mention some interesting stuff that may lead to the interviewer then asking you further questions on that topic and you can carry that

discussion from there. Make sure you emphasize all your best points in this speech and give them just enough so that they are interested but just little enough that they are compelled to ask more about it.

When my turn for the interview came, I entered the room with a generous smile, and greeted the interviewer good morning with a firm handshake.

(FIRST IMPRESSIONS MATTER. The first 10 seconds are crucial in how they perceive your body language. Enter the room with a pleasant expression, walk confidently, greet them nicely. Just pretend to be an innately confident person even though you may feel anxious. When you sit, maintain a firm posture. Keep an active track of these in your mind.)

I was about to begin with my speech, but he stopped me, put my resume aside, and **asked me to tell him about who I am, outside of what I had already added to my resume.**

(This is something that might be done in order to catch the student off guard. Do not panic and answer honestly about who you are as a person, what are the things you like to do, what motivates you and drives you, etc.)

#TIP: it is often advisable to mimic the interviewer's demeanor and attitude towards the interview. If your interviewer is being strictly professional, so should you. But since my interviewer was being conversational and wanted me to talk about my hobbies and personality traits etc, I went for it and talked about everything i am interested in, everything i've been doing lately etc.

#TIP: Try not to entirely lie about stuff to sound cool or professional. Just tell them about what you are genuinely interested in (although you can be selective about what you choose to tell them). Because they can and WILL dig deep into it and cross question you about it. For example, I mentioned I liked reading and then he asked me to name a book I'm currently reading, then asked about the plot of the book and what it is that made me interested in that book. I also mentioned being academically inclined and he immediately asked me my grades XD.

We mostly talked about books, and other hobbies of mine in thorough detail. After which we moved to academics (because I had mentioned being academically inclined), where I went into thorough detail about the subjects and topics that I had in each subject. I basically gave him an in-depth overview of all the things I had studied in my second and third year. We talked about statistics, probabilities, Machine learning, Artificial Intelligence, Data Warehousing and Mining, Big Data Analytics etc. every step of the way, he kept asking me thorough questions about the subject matter, which I answered. He asked me to keep explaining in more and more detail, what things meant, which I kept doing. HENCE, it is always important you know quite well the stuff you add to your resume and mention in your elevator speech.

He also asked me about my Internship in quite pinching detail. Right from how i got it, to what code i wrote (he asked me to write down the specific SQL and python code that i used to extract the data and load it into a workspace.)

#TIP: make sure you know what you are talking about well enough that when any random question about it is asked, you are able to answer within a heartbeat. Otherwise, it might form a bad impression.

#TIP: if you do not know an answer, just say that you are not aware about that particular piece of technology (in the most polite sounding way possible). No one is an all-knower, so it's completely alright. Rather you can also suggest to them the related things you do know about.

After about 45 minutes, my interview concluded.

After all the interviews were over, the results were announced in college itself. A total of 29 students were placed for the consulting analyst role.

General Tips

- Be prepared about what you are going to say, practice speaking in front of a mirror if you will. Practice handshake.
- I have been told that with certain companies like deloitte, it matters less what you say, more how you say it. So practice speaking clearly, convincingly and confidently.
- Be the best version of yourself. Make sure you reflect your best qualities. Try to not to lie or make things up. Rather exaggerate on the things you already are.
- Make sure your resume is up-to-date and crisp.
- Make sure you are dressed neatly.
- Be prepared to handle bouncers. Make sure you know what you are going to say and do when put in a tough spot.
- **Practice SQL and OOPS questions, along with basic DSA ones.**
- Be professional at all times.

Feel free to connect with me in case of any doubts :) **ALL THE BEST!!!**
