

Name:- Prasanna Sridharan

Department :- INFT

Package :- 14.5LPA (8 lakh fixed + 1 Lakh variable + 5 lakh Retention bonus)

Job Role :- Strategy Developer

Job offered :- Yes

Job Location :- Andheri

Eligibility Criteria:-

- CGPI ≥ 7
- 10th & 12th, diploma $\geq 65\%$
- No live ATKT
- Branches Eligible: BE(CMPN, INFT only)

Interview Process :-

1. Programming Test (Based on C/C++) Time :- 90min
2. Final Round : Technical Interview
3. HR Round

Description:-

The whole process was conducted 2 day long.

Day 1:- Programming round

Day 2:- Technical and HR round.

Round 1 (Programming Test):-

There were a total of 2 questions. The questions were based on real life scenario first question of based on queue and next question was based on priority queue

Question 1:-

Given 2 Structure

```
struct EventStatus{
    char eventType; // 'S'
    char responseType // 'P', 'M', 'C' , 'T'
    Int count;
};
```

```
struct RequestStatus{
    char eventType; // 'R'
    Int count;
};
```

You have to perform 2 operations: push and pop.

push() :- push all the elements

pop() :-

- pop all the elements from EventStatus where responseType should be 'P' and 'M' for responseType 'C' or 'T' pop only when count >2 otherwise increment their count by 1 push to the queue.
- pop from RequestStatus when the previous responseType is 'C' or 'T' otherwise push to the stack with count incremented by 1.

Eg :-

Input	Output
S,M,0	R, 1
R,0	S, C, 2
S,C,0	S, T, 2
R,0	
S,T,0	

Question 2:- I don't remember but it was based on priority queue

I was only able to solve the second question partially.

Results of Round 1 were announced at night 9.30pm from 100 students and 15 got selected in Technical and HR Interview.

Technical Round:

Q1. Given the head of a Linked List of size N, consisting of binary integers 0s and 1s, the task is to sort the given linked list.

Examples:

Input: head = 1 -> 0 -> 1 -> 0 -> 1 -> 0 -> NULL

Output: 0 -> 0 -> 0 -> 1 -> 1 -> 1 -> NULL

Input: head = 1 -> 1 -> 0 -> NULL

Output: 0 -> 1 -> 1 -> NULL

Q2. Given a pointer to a node to be deleted, delete the node.

Note that we don't have a pointer to the head node and it is a singly linked list.

Example:

Suppose we have access to 3rd node which is to be deleted

Before deleting

1 6 3 4 2

After deleting

1 6 4 2

Q3. Given a character array, return an integer which is the reverse of the character array

Example:

Input: char *ch = "4321"

Output: 1234

Note: Many questions related to this questions were asked like how do you traverse character array, how to you get the length and is there any in-built function to get the length.

C++ Questions

1. Difference between C and C++ .
2. What is friend function? Why is it used ? What are its advantages over simple inheritance?
3. Virtual function
4. What is Malloc? Why is it used and its implementation
5. What are pointers? Can we create an array of pointers?
6. Given an array of pointers of size 5 which stores addresses, how can you access and change the content of third element of the array?
7. Do classes have size? Suppose there are many classes created but none is instantiated then what would be the size?
8. What are the different types of memory (stack and heap). Where are variables allocated by malloc stored?
9. What is polymorphism? What is compile time polymorphism and run time polymorphism?
10. In how many ways a method can be overloaded?
11. C++ code of inheritance, overloading and overriding.
12. How can we create objects in C++ and its implementation ? (using new keyword and using constructors.)
13. How do we call the base class method in derived class?
14. Can constructors be private?

Round 3 (HR Round) :-

1. How was your technical interview on a scale of 10?
2. Introduce Yourself
3. Which technologies do you know? (I answered JavaScript and its frameworks)
4. Since all your projects are in JavaScript would you be able to write code in C++?
5. Do you have any interest in finance?
6. Tell me something about your family
7. Do you have any plans for masters?
8. What are your long-term career goals?
9. What do you do on a daily basis and how do you manage your time?
10. What are your hobbies?

Additional Note:

1. Pseudo Code was not allowed. You were supposed to write the entire code in C++.
2. No questions were asked on dbms and operating system.
3. Study about the keywords of C++
4. Multiple approaches were asked for the same question
5. Be honest and confident. Interviewers are very friendly
