- 24rd August 2022 (Online Coding Assessment)
- 15th September 2022 (Virtual Group Discussion )
- 19th Sep 2022 (PPT & final Interview ie Tech + HR )

Results Announced 21st September 2022

### **Round 1 (Aptitude Test )**

Platform : **iMocha**

Test Duration : 70 Minutes - 52 Questions - No negative Marks

It had total 5 sections

Section 1 : Numerical Ability (15 Q) => Quantitative aptitude

Section 2 : Reasoning Ability ( 15 Q )=> Logical Reasoning

Section 3 : Statistics & Data Interpretation ( 5 Q ) => Statistics ,Data Interpretation Section4 :

Verbal Ability (15 Q ) => Ordering of sentences , Sentence correction , spot the error , double blanks , ordering of words

Section 5 : AI Evaluation :Writing (2 Q)

This time , a new section i.e. AI evaluation writing was added where based on 2 different scenarios , you will be asked to write a formal & informal letter ( more than 100 words ) .This section was a little bit time consuming . Read the question thoroughly and Try to solve both the questions

Each section was allotted a fixed amount of time and switching between sections was not allowed . Here Aptitude questions were really simple , I would recommend Indiabix website and RS Aggarwal book for practise .

## **Round 2 (Coding Round )**

Previous year there was no coding round for EY. This was a surprise for us. This test was also conducted on the iMocha platform. 2 questions of easy to moderate level were being asked to solve . I don't remember exact questions that were asked but if you have moderate DSA skills you can easily solve those.

Duration: 60 minutes

Number of questions: 2

Practice coding questions platforms like leetcode , hackerearth ,hackerrank , GFG **Out of 180 , 67 students were being shortlisted for the third round ie Group discussion round (GD)**

### **Round 3 (GD ie Group Discussion )**

In this round , there were a total 6 batches .Every batch consisted of 10 - 12 students approx .  
Topic for my panel was : How technology transforms the world.

Facilitator announced the topic and each of us got 3 mins to talk. It was not like a traditional group discussion. Facilitator pointed to each student and he had to speak about the topic.

#### **Some suggestions from my side -**

- Be original as possible. Do not imitate someone else ,be yourself. Have a good posture and sit straight. Be simple and humble. It is necessary to stick to your values and beliefs but do not disrespect other people's opinions and values.
- Instead of pretending that you are listening to your fellows, try to mention their points while you speak. This is the best way to show that you are listening.
- Try to speak at least three times. If you are speaking less than this, you have less probability of getting selected.
- After you have delivered your opinion, ask other people to express their views about it. It is good to nod your head when others speak as it shows that you are receptive to them.
- Actively participate in the discussion. The invigilator is assessing your behavior. So just present your views.
- Nowadays GD rounds happen virtually .So make sure you are having a good wifi connection and no mic /camera issues .

**Out of 67 ,34 were selected for the final interview round**

### **Round 4 ( final Interview ) Tech + HR**

In the morning , at around 8.45 am , we had a pre placement talk . After this session , according to time slots and respective panels , we were being interviewed by the senior Manager of EY .My interview lasted for around 1 hour 15 mins minutes. There was no separate technical and HR interview.

#### **Interview -**

1. The interview was conducted on Microsoft teams.
2. The interviewer was very friendly. He asked me if I was nervous and made me feel really comfortable. TBH i was very nervous at the start but later it was more of a discussion rather than an interview.

3. He asked for my introduction, I said all the things which I had prepared beforehand. He then said that he doesn't want to hear things which I have prepared. He wanted a bit more casual and candid interview.
4. Then he asked me about my strengths. I mentioned one of my strengths as curiosity. We discussed thoroughly what makes me think that I am curious. He asked questions about politics and farm laws (trending topic of that time) since I said I follow national news.
5. Then he asked about my projects. A certain project interested him a lot and we discussed that project for nearly 40 mins. I first explained to him the problem statement and then the solution. He grilled me in and out about the solution. He asked me if there is a different way to approach this problem. He shared his views on how this solution can be improved. He was not that keen on knowing the technical aspects but how creative and unique the solution and problem is.
6. He then asked some basic HR questions.

**Tips:**

1. Don't lie in an interview. It becomes very obvious if some questions are asked about it.
2. Prepare your resume thoroughly. You should be comfortable with explaining each and every point mentioned.
3. Be very thorough with your projects. You should be able to explain your thought process behind that project and how you have solved that.
4. Acknowledge points being shared by interviewers, don't be ignorant and try to prove your opinion.
5. Try to learn what the consulting industry is before the interview and understand if you really want to get into it.
6. Ask a lot of questions while discussion is going on.
7. Do enough research about the company and make sure to note points from the placement talk. You can ask questions related to it in your interview.

Later when the results were announced I was selected for the tech consulting ( ITT Digital ) by them.

Students for tech consulting were selected first and after 2-3 weeks cybersecurity students were selected.

**Total 18 (6 from INFT) students were offered the job at EY.**

EY wasn't the first company that visited our college. I appeared for many companies before but wasn't able to clear the rounds. But I didn't lose hope and eventually

succeeded. VESIT has a good placement record and I am sure if you are trying genuinely you'll get placed in a good company.
