

Name: Nidhi Bangera

Class: D20A

Department: INFT

CGPI: 9.44 (Till 6th sem)

Job Offered: Yes

Status: Dream

Email: nidhibangera179@gmail.com

CTC: 637000

The process of selection was broken down into four different rounds. The first round consisted of an aptitude test, which aimed to assess your abilities. The second round was a coding assessment where you would be tested on your coding skills. In the third round, you must participate in a group discussion with other candidates to evaluate how you communicate and present yourself. Finally, in the last round, there would be a virtual interview where you would be asked a variety of questions related to the job and your resume.

1) Aptitude Test:

The test was conducted online on the iMocha platform. The test duration was **70 minutes**.

The test had five sections:

- **Section 1: Numerical ability** -> 15 questions for 20 minutes
- **Section 2: Reasoning ability** -> 15 questions for 20 minutes
- **Section 3: Statistics and Data Interpretation** -> 5 questions for 5 minutes
- **Section 4: Verbal ability** -> 15 questions for 15 minutes
- **Section 5: AI evaluation** -> 2 questions for 10 minutes

In section 5, you will be asked to write two emails based on two different scenarios, one in a formal style and the other in an informal style. The length of each email should be around 100 words.

2) Coding round:

The results of round 1 were announced in 2-3 days. The coding round consisted of 2 questions. The duration was 60 minutes. The coding questions were relatively straightforward, requiring only basic programming constructs such as if-else statements and loops, and were easily solvable with a little effort. The questions were based on **Strings** and **Arrays** topics.

Tip:

If you are finding it difficult to understand the given question, my advice would be to focus on the solved examples provided along with the explanations. This will give you a better idea of how to approach the question.

3) Group Discussion:

The results for round 2 were announced after 20 days. The third round was the group discussion round. The topic for my panel was "Work from Home: Good or bad"

Tips:

- 1) Listen actively: It's important to listen to what others are saying during a group

discussion. You can show that you're engaged and paying attention by nodding or using other nonverbal cues, such as maintaining eye contact. This can also help you build rapport with your fellow participants and demonstrate your collaborative skills.

2) Speak clearly: Speak clearly and confidently, but don't dominate the conversation. Be concise and to the point.

3) Respect others' opinions: Everyone has their own perspective and opinions. It's important to respect others' opinions, even if you don't agree with them.

4) Stay on topic: Stick to the topic of discussion and avoid going off on tangents. This helps to keep the discussion focused and productive.

5) Take turns: Allow everyone in the group to participate and express their opinions. Avoid interrupting others or speaking over them

4) Virtual Interview:

During the interview round, the interviewer focused mostly on my resume, so it's essential to be well-versed in it. The interview began with me introducing myself, and then the interviewer asked questions related to my resume, followed by some basic HR questions. Since the interview was for Cyber Technology consulting, I was asked about the basic gist of security and why it's important. Always be well versed with the role you are giving the interview for. In the end, always ask questions. I asked her about the daily tasks to be performed in this role.

Tips:

- Practice Aptitude and Coding daily.
- RS Agarwal and Indiabix is enough for Aptitude.
- For Coding : Leetcode, Hackerrank, GeeksforGeeks.
- Be confident while giving rounds.
