**Round 1 (Aptitude Test )**

A total of **300** students were shortlisted for the Online test inclusive of all the roles that they were hiring for.

Platform : **iMocha**

Test Duration : 70 Minutes - 52 Questions - No negative Marks

It had total 5 sections

Section 1 : Numerical Ability (15 Q) => Quantitative aptitude

Section 2 : Reasoning Ability ( 15 Q )=> Logical Reasoning

Section 3 : Statistics & Data Interpretation ( 5 Q ) => Statistics ,Data Interpretation

Section4 : Verbal Ability (15 Q ) => Ordering of sentences , Sentence correction , spot the error , double blanks , ordering of words

Section 5 : AI Evaluation :Writing (2 Q)

This time , a new section i.e. AI evaluation writing was added where based on 2 different scenarios , you will be asked to write a formal & informal letter ( more than 100 words ) .this section was a little bit time consuming . Read the question thoroughly and Try to solve both the questions

Each section was allotted a fixed amount of time and switching between sections was not allowed . Here Aptitude questions were really simple , I would recommend Indiabix website and RS Aggarwal book for practise .

**Out of 300 , 180 students were shortlisted for the next round ie coding round**

---

## **Round 2 (Coding Round )**

This test was also conducted on iMocha platform on 24 Aug 22 at 8.30 pm .

2 questions of easy to moderate level were being asked to solve . One question was related to sorting of arrays and another question was regarding dynamic programming :i.e. finding length of the longest subsequence of the array ,such that the absolute difference between adjacent elements is 1.

My Advice : Do not directly start to code, make a rough outline of your understanding and iterate your approach before coding. This will save you time in the exam.

Duration: 60 minutes

Number of questions: 2

Practice coding questions platforms like leetcode , hackerearth ,hackerrank , GFG

**Out of 180 , 67 students were being shortlisted for the third round ie Group discussion round (GD)**

---

### **Round 3 (GD ie Group Discussion )**

In this round , there were a total 6 batches .Every batch consisted of 10 - 12 students approx .  
Topic for my panel was : work from home a boon or bane ?

After announcing the topic ,the facilitator gave us 10 min to jot down some points .The topic was fairly easy and everyone from my panel was able to speak and express their points smoothly .  
One day prior to your GD round ,cover up some recent GD topics and rehearse with your friends in google meet , seek their feedback on how you performed so that you won't stutter on the final day and you will be familiar with the virtual environment too . Just practice a little bit of speaking and you will be easy to go.

As far as the interactions are concerned ,you should firmly express your points with confidence .When you are putting forward your opinion , you need to be respectful .If you don't agree with someone , you should not be rude or completely uncaring .

### **Some suggestions from my side -**

- Be original as possible. Do not imitate someone else ,be yourself. Have a good posture and sit straight. Be simple and humble. It is necessary to stick to your values and beliefs but do not disrespect other people's opinions and values.
- Instead of pretending that you are listening to your fellows, try to mention their points while you speak. This is the best way to show that you are listening.
- Try to speak at least three times. If you are speaking less than this, you have less probability of getting selected.
- After you have delivered your opinion, ask other people to express their views about it. It is good to nod your head when others speak as it shows that you are receptive to them.
- Actively participate in the discussion. The invigilator is assessing your behavior. So just present your views.
- Nowadays GD rounds happen virtually .So make sure you are having a good wifi connection and no mic /camera issues .

**Out of 67 ,34 were selected for the final interview round**

---

### **Round 4 ( final Interview ) Tech + HR**

In the morning , at around 8.45 am , we had a pre placement talk . After this session , according to time slots and respective panels , I was being interviewed by the senior Manager of EY .My interview lasted for around 30 minutes .

#### **Technical interview -**

1. The interview was conducted on Microsoft teams platform and was both a technical and a managerial interview.
2. The interviewer was very friendly and the interview started by exchanging greetings, enquiring about my day, and so on.
3. He then asked me to introduce myself for about 5-6 minutes covering my educational background, strengths/weaknesses, ,your achievements , , internships, projects, hobbies, and so forth.( Basically they check that all the things mentioned in resume are known to you) ( at least mention 2 things that makes a good impression .The way you portray yourself is very important . keep your intro short & crisp .)
4. They further moved on to my work experience .(Here you have a chance to properly frame and describe all things you learnt and performed during the internships . )
5. We then moved on to discussing each of my projects in detail regarding the tech stack used and why that particular technology was used, alternate technologies which could be used, the motivation behind each project, your role & contribution and a little bit of cross-questioning on the same. He even asked me , what challenges did you face during your group projects ? How will you optimize the model ?

#### **HR Interview**

1. He asked me a situational question where he was just trying to understand my approach towards that situation , how will I tackle these situations .
2. Did you enjoy the entire process of recruiting ?
3. Family related questions ?
4. Are you willing to relocate ?
5. It was a pretty chill interview .At the end , they asked me if I had any questions for them.
6. ( do your research about the company & asked your questions wisely )

I asked them this :-

- What can I do more before the job is given? If I get selected that will help improve my performance in the company and I can have some background knowledge .

Later when the results were announced I was selected for the tech consulting ( ITT Digital ) by them.

**Total 18 (6 from INFT) students were offered the job at EY**

If you have any doubts , feel free to contact me .  
I would be happie to help :))  
Best of Luck guyzz !!
