CTC	11,60,000			

Process:

1. Shortlisting Round (Top 60 students selected based on 10th/12th/CGPA)
2. Online test (28 students selected)
3. Technical interview 1 (5 students selected)
4. Technical interview 2 (5 students selected)
5. HR round (5 students selected)

Online test

- 95 mins
- 6 sections :
 - Logical Reasoning
 - Quants
 - Analytical skills
 - Verbal Ability
 - Technical section
 - Coding section (1 problem)
- Sectional Timers for every section

Technical Round 1

Introduction:

- The interview began with a self-introduction.
- The interviewer asked to explain the entire backend structure of a project I had worked on during an internship, with a focus on the code and logic used.
- I was also questioned about various libraries like bcrypt.js, Redux etc. and how it is implemented.
- Database Questions: The discussion then shifted to databases, where I was asked about different types and real-world use cases.
- There was a specific conversation about MongoDB and SQL, comparing their strengths and weaknesses.

Data Structures and Algorithms:

- The interviewer asked me to solve a coding problem in my preferred language (C++) with my screen shared.
- Link - <https://www.geeksforgeeks.org/find-triplet-sum-two-equals-third-element/>
- I started with the brute force approach and later went on to improve time complexity with more efficient solutions.

Curriculum based questions:

- OOPS based concepts - She asked me to explain the four pillars of OOPS by coding examples. There were a lot of follow-up questions on the same.
- Computer Network - Basic concepts like http/https and OSI model and algorithms which are used in the same.

- Sql normalisation concept and joins.

Lastly she asked a puzzle and wanted to see my approach. The interview lasted around 55 mins. The interviewer was very sweet and made me feel very comfortable the whole time.

Technical Round 2

Introduction:

- The interviewer began by asking for my introduction.
- He showed a keen interest in my recent internship, particularly inquiring about my involvement in a Machine Learning project.
- The interviewer asked for detailed information regarding the data cleaning and processing techniques I had employed, as well as the specific ML algorithms used.
- He also asked what difference did the project make on the organisation as a whole and was content with my answer.
- I was also asked about the most significant learning experiences from this internship.

Subsequently, the interviewer turned the conversation towards a mobile application project I had mentioned in my resume.

- As this project was a collaborative group project, he asked about my role and contributions within the team.
- The discussion delved into the technical aspects, including the frameworks and libraries I had utilised for this project.

Towards the end, the interviewer inquired about the skills listed on my resume, asking questions related to those specific skills. This round lasted around 20 mins.

HR Round

- The round was a typical HR round and started off with my introduction.
- The interviewer asked about my overall experience during the interview process, encouraging me to share my insights and observations.
- She took the opportunity to provide insights about Forcepoint, including its corporate culture and values.
- Following the discussion, she asked for any questions I had about the company or the interview process.
- I asked her a few questions after which the interview ended. The entire round was 25-30 minutes.

TIPS

- Review the job description requirements and focus on important topics from there.
- For DSA problems, practice on platforms like LeetCode (easy to medium difficulty).
- Companies coming to our college do not have a high level of requirement, so do not prepare DP, trees, graphs for them. If you are already comfortable with advanced concepts, then it's well and good. Otherwise stick to strong basics and projects.
- Practice aptitude questions online for the first four sections of the online test.
- Ensure that your resume includes internships and substantial projects, as they create a positive first impression and can influence the direction of the interview.
- Be thoroughly prepared with all your projects and foundational curriculum topics, including OOPS, DBMS, CN, and SQL.
- Support the skills you mention with relevant projects.
- Ask multiple questions to the HR interviewer, demonstrating your enthusiasm. Although the HR round is conversational, **maintain professionalism at all times.**

All the best :) !!!
