

Name: [Yash Kumthekar](#)

Department: INFT

Package: 13 LPA

CGPA: 9.57 (Avg upto 6th Sem)

Job Role: Software Engineer in Analytical Verification (Jr. Analyst)

Job Offered: Yes

Job Location: Goregaon, Mumbai

Eligibility Criteria:

1. No Live KT
2. CGPA $\geq$ 9.0
3. Date: 25/07/2022

Rounds:

1. Technical, Aptitude Test (40 Questions from Java, Python, SQL, 30 Questions from Aptitude)
Time: 90 Minutes
2. Technical Interview
3. HR Interview

Description:

For this year the procedure was entirely conducted inside the college campus.

9 am Test was conducted

3 pm Technical Interview started

7.30 pm HR Round started

1. Round 1 was conducted after the pre placement talk. 251 students applied for ISS. The round was conducted on Google Form. Before the test started all the participants were divided into groups of 30. The round was conducted inside the labs and placement coordinator were assigned to monitor the test. Once the 90 minutes was over placement coordinators were notifying that we have to submit the test. Don't think that the test can be submitted later since it's a google form. Don't make that mistake because after some time they will stop accepting the response and you won't be able to submit the test at all. Marks Distribution was like 1 mark for each correct answer and -0.25 for each wrong answer. The technical questions were based on Java, Python, SQL and Aptitude questions.
2. Results of Round 1 were announced after approximately 2 hours. From around 251 students only 29 students were selected for the Technical Round. In the Technical Round there were 5 to 6 different panels. This year ISS came with 6 job roles namely **Software Engineer in analytical verification, General Application Developer, Software Engineer in Test Automation, SQL Database Testing, Frontend Developer, SQL Developer**. During registration we were given a preference form on the 6 job roles and

my preferences were analytical verification, SQL Developer, General Application Developer in that order. I am guessing that because my preference was analytics I was interviewed by the Director of Data quality and Assurance in ISS (but nothing is guaranteed). For me the interview lasted for 1 hr. Initially he asked me to introduce myself, mention everything you have done in your engineering. He was curious about my projects. My projects were more focused on Machine Learning. He asked about preprocessing, dataset originality, which model used, etc. I would strongly recommend building your profile around the job role you are aiming for. Following are the questions asked during my interview:

- Dataset was shared with me find the anomalies and write the python code for the same in jupyter notebook.
 - Start with removing null and outliers. Standardize the data, one hot encoding, string manipulation and many more. Basically focus on **data cleaning, data integration, data reduction, and data transformation**.
 - Different types of pandas processing techniques for fetching data like proportion between the data rows of two columns.
 - 2 tables were given (Product, Customer) and I wrote a SQL query to join the 2 tables.
 - Perform the query joining two tables and find the rows with max number of quantities sold for each product - (order by, group by)
 - I didn't get any question related to my other preferences. But some of my friends were asked about 2nd preference switch. Be very honest and respectful in your interviews.
3. Results of Round 2 were announced immediately. From 29, 12 students were selected for this round. My HR interview was at 8p.m. The HR interview was taken by the Director and HR and Operations head of ISS. In the HR Interview they asked me about everything like Introducing myself, why I chose this field, what are my strengths and weaknesses, family background, why this company, why this job role, planning to go for higher studies, etc. At the end of the interview they asked me if there is any question you want to ask. I asked about the present or upcoming projects involved with my job profile.
4. By 10 pm results were announced and all the 12 students were selected. (6 from INFT, 6 from CMPN)

Tips: Be Honest, Humble and Confident in the interview. If you don't know something tell them directly you don't know because points will be deducted if you bluff. If you don't know the answer then tell them so that they can give some hints or some other questions. For Test prepare Core Java Concepts like OOPs, Exception Handling, Collection Framework, Multithreading, Python fundamental concepts, SQL joins, aggregate functions.

Concentrate on Algorithms, Data Structures, Data Preprocessing with Pandas, DBMS as it will help for technical interviews.

Most Important thing in the interview process is BE HONEST. Whatever it is, even if you don't know the answer to a single question that's fine. Prepare well for technical and

aptitude test as the most no of students are dropped. Technical interview will revolve around your Job Description. And be ready to implement your skills related to it. Just don't revise the theoretical concepts.

!! ALL THE BEST !!
