Criteria: No live ATKT, No Gaps, Min CGPA 9
E-mail: pawar.omkar2001@gmail.com / d2019omkar.pawar@ves.ac.in
Contact Number: 8177845430

Hello all,

I am Omkar Pawar from D20B and would like to share my placement experience with all of you. I am sure this will surely help you to prepare for your placements. I have been placed in **ISS Governance, Mumbai** branch. This is the very first company which comes after JPMC and in offline mode.

As I was also working as a **Placement Co-ordinator**, I have seen the entire placement processes from other perspective and I am going to share some dos and don'ts for you.

Placement process will initially start by sending registration forms to the students. I have seen that lots of students lost their opportunity just by entering wrong information in google form while registering. In the form, clearly fields will be mentioned and double check and cross check the entire form again before submitting to avoid further problems and issues.

When I was in my third year, I also decided that I will start my preparations for the placements in Sem 5 or 6 itself. But, as the mini projects, submissions, and other things come up, you don't get time at all for this things. But as our batch was lucky, our lectures were online. So, it resulted in getting extra time which we utilized in preparation for our placements.

Many paid and free courses are available for placement preparations but trust me, don't go for such courses as they will not only charge you money but also take your extra time. For placement preparation, I will attach resource links at the end of this document from where I personally studied and prepared for my placements.

So, now coming to ISS placement drive, first of all you will have to register for the placement drive by filling the google form. At our time, around 600 to 700 students have filled the form from entire college and from that only 21 were shortlisted from the 1st Round. So you can clearly see the dropout rate. Relax!! I am not scaring you but only telling the fact how it works.

Before the actual drive, 2-3 days ago they conducted pre placement talk in online mode in which they explained everything about their company and their placement process. Make sure that you attend this session very carefully and note down some important key points. They will help in your HR round.

ISS drive will consist of 3 rounds,

1. Quiz Round
2. Technical Interview
3. HR Interview

First round will be Quiz round in which you will get 3 sections such as:

1. Java Programs - Program Outputs, Spotting error, syntax etc.
2. Python Programs - Program Outputs, Spotting error, syntax etc.
3. SQL / DBMS - Basic MCQs, To complete queries etc.

They will split shortlisted students in different groups depending on job role preferences. They took around 1.5 hours for displaying results. In meanwhile, have your lunch as you will not get time afterwards.

Second round will be technical round. In this round, they will ask you questions from technical background depending on the job role you given preference for. I have given preference for both Developer and Analyst but Developer was my first preference. So, they clearly asked me what will be your dream role if we offer you one of them. Depending on your answer, they will further frame their questions. So, as developer was my preference, they asked me very basics of Java Programming and some questions related to quiz from round 1 like justify why you selected this particular option and not the others. So, you will have to explain and justify them why you selected correct option and why other options are not correct. Later, in the same round, they will give you the Coding Quiz which will consist of 1 Coding question which will be easy to moderate level. Don't even try to search on google or copy as your entire screen is already shared with them. There were 2 interviewers. One in front of me and one who joined on Microsoft Teams from their US Office. Interviewer clearly given me idea about all this and also said like in case I have any doubts or queries, I can ask him. He also said like before coding, you can discuss with us and we will help you if needed to further fine tune your solution.

1. What is Class, Object?
2. What is interface?
3. What is inheritance?
4. Types of inheritance supported by Java? Why multiple inheritance not supported?

So overall my Round 2 was very easy as I got the question to remove all the white spaces in a string without using any in built string or array function. Till this point of time, I was the first one from my panel for the interview.

Then I got confidence the way interviewer told me and taken my interview, I was sure that I will get shortlisted for the next round and so happened. I was again shortlisted for the 3rd and final round. Till this point of time it was around 3 or 4 pm. So here one small tip for you whenever you get time till results are displayed, you can go and eat something as you will not get time once the process continues.

In 3rd round, it was HR Round. It started around at 5 or 6 pm and lasted till 9.30pm. In HR round they simply ask questions about your family background and all other things.

1. Tell us something about yourself?
2. Who all are there in your family?
3. Why you chosen IT as your career department in engineering?
4. Why you have chosen ISS? What do you know about ISS?
5. What if some another company comes and give you more or double package?
6. Any plans for further studies?

Make sure you answer in polite and sincere way. Don't be rude. They might feel some of your answers rude and disrespectful. So, simply avoid it. Have a smile on your face.

And by the EOD, we got the results of final selected students. Around at 10.30pm we got the list and my name was there. Then I felt like this is a fruit of entire day's hardwork.

Here are some Do's and Dont's for you:

Do's:

- Have a smile on your face during the entire interview process.
- Be confident.
- Answer in simple words. If you don't know something, just say, Sorry Sir, I don't know or I am not able to recall.
- Have a good breakfast and lunch whenever you get time in-between. Now that doesn't mean you go in between interview process.
- Do ask your doubts or issues to the interviewer. Don't hesitate. They are ready to help.

Dont's:

- Don't try to copy or do malpractices in 1st round as you will be out of placement drive as they have their own company person supervising you.
- Don't bluff. Don't confuse the interviewer. It is their day to day task to take interviews. So they know each and every aspect.
- Don't judge the interviewer.
- Don't argue with the interviewer.
- Don't ignore messages and mails from placement incharges and placement officers as they are important.
