

Name- Pushkar Mavale

Department- IT

CGPA- 9.48

Job Role- Junior Analyst(SQL Developer, General Application Developer)

CTC- 13lpa

Job Offered- Yes

Date – 25/07/22

Job location- Goregaon(Mumbai)

Eligibility Criteria-

CGPA $\geq$ 9.0

No live KT

Introduction

Eligible branches were **CMPN,INFT, EXTC,ETRX**

During this time, ISS came with six roles-

General Application Developer

SQL Developer

Front-end Developer

Software engineering

Analytical Verification

Database Testing

Prior to rounds, company releases a google form in which we need to specify our preferences for the above mentioned job roles

The entire placement process was offline in college campus.

Overview of Rounds

The placement process is conducted in 3 rounds-

1) Technical+Aptitude

2) Technical Interview

3) HR Round

Technical+Aptitude MCQ round

This round consisted of 4 sections – **java,python,sql,aptitude**

Java questions were related to data structures,oops principle,multi threading, etc. In total there were 18 java questions. The questions were of **medium** difficulty.

Python questions were basic lists,dictionaries,set related questions. In total there were 17 questions. The questions were of **easy** difficulty

Sql consisted of select queries.In total there were 5 questions. The questions were of **easy** difficulty

Aptitude section comprised of 30 questions with **easy to medium** difficulty. The resource to be followed for aptitude primarily would be **IndiaBix.com and RS agarwal book**.

The entire round is conducted in college labs.

This was the most important round as they shortlisted only 29 students out of 251 who were registered

Technical Interview

This round started around 2:30. All the shortlisted students were assigned to panels.

The interview started with asking for my introduction. Then he started with some general questions like-

What is Internet?

What is a server?

Then they started with SQL as it was my first preference. My second preference was General Application Developer.

The interviewer just took a paper and drew tables and asked select queries on it. All the questions were practical demanding written query ans on the paper.

Then they asked which language am I comfortable with except sql. I answered for development purposes I have used python and for DSA or competitive programming I use Java.

Then he asked some java questions-

- 1) What is abstractions?
- 2) Difference between Interface and Abstract class
- 3) How many relations can you establish between two classes?
- 4) Can abstract class have a constructor. If yes , what is the use?
- 5) Can we instantiate a abstract class?
- 6) What does java collection framework consists of?
- 7) Difference between TreeMap and HashMap
- 8) Is order maintained in HashMap when we query the results after inserting?
- 9) How to maintain the order of inserted values in HashMap?
- 10) What is a HashSet?
- 11) If we insert two objects in HashSet, will it distinguish it?
- 12) Suppose we create two objects like new Emplpyee("abc") and new Employee("abc") and we insert both of these into Set what will be the size of set.
- 13) How to tell set that both are same variables explicitly
- 14) How to sort objects in a arraylist.
- 15) Suppose an arraylist consists of objects having two variables and I want to sort the arraylist on the basis of first value how to do it? Follow up question- How to do on the basis of both first as well as second variable
- 16) What is compare method
- 17) Lastly he asked me a puzzle – There is a blind man. He has two red pills and two blue pills. He has to eat exactly one pill of both colour. Neither more as he will die of overdose nor less. How will he make sure to take those.

18) He asked if I had any question for them (Always ask question to the interviewer during this stage. It would be better to maintain a list of questions for this particular question as most of the companies end their interview with this)

I was able to answer all of the questions above and was selected for the next round. For this round major focus should be on OOPS and sql (ofcourse depending on preference which you gave). 12 students were further shortlisted after this round.

HR Round

After all the interviews were conducted we got to HR round. My HR Round was scheduled around 9:10.

The HR round started with formal introduction of panels and they asked for my introduction. Then they started with questions like-

- 1) How was my day?
- 2) Tell us about your hobbies, long term goals, short term goals, your family background etc.
- 3) How will you travel to our office?
- 4) Any plans for further studies?
- 5) How comfortable will you be with different roles?

With this ended my HR Round.

The results were announced on the same day around 10:45 pm. All the students who got to HR round were selected. (6 from IT and 6 from Comps)

Some tips-

Understand the fundamentals of OOPs and SQL thoroughly as majorly most of the companies ask questions on these.

Don't neglect aptitude as it can make or break your day. Regular practice is the key.

Don't bluff in front of the interviewer. If there is any answer which you don't know just let them know politely.

Be comfortable and confident while speaking and maintain eye contact

For any more queries, feel free to connect. All the very best from my side.

👍👍 ALL THE BEST 👍👍
