Job Offered: Yes
Contact: 9082307542
CGPA: 9.57
CTC: 17.75 LPA
Eligibility: 7 CGPA

Company Status: Dream

Placement Experience

The complete placement process for JPMC is divided into three Rounds.

Round 1: Coding Round

- All the eligible participants who have registered for the placement process of JPMC will receive a link form Hackerrank platform.
- You will be given two questions to solve out of which one question will be leetcode easy level and the other is leetcode medium.
- This round is completely proctored and your camera is on for the entire duration. Also switching of tabs should be strictly avoided.
- Try to solve as many leetcode Easy to Medium questions as possible as some of the questions are directly from leetcode with almost no to slight modification.

Round 2: Online Interview

- After the first round candidates will receive a link for the online interview link.
- This round is conducted on Hirevue platform.
- You will be given two questions, Each question is given 2 minutes to answer and you get two tries for both questions.
- In the first attempt you can record yourself while answering the question and analyze your sound and video and accordingly adjust for second attempt.
- **NOTE:** If you think you have done well in the first attempt then I would recommend to submit it otherwise the second attempt gets directly submitted as your final answer.
- **Tip:** Stay relaxed and dont be too serious while answering the question. You should be formally dressed (preferably white shirt with Formal Blazer on top).
- Type of questions asked: **HR**

Round 3: Code For Good

- After evaluating you from the first two rounds, a list of selected students is given from JPMC to the Placement cell.
- If you are selected then you are eligible for Code For Good which is a hackathon in which Non Profit organizations come and give their problem statement.
- All the selected candidates from different college's all over India are randomly broken down into teams.
- The dates of CFG will be given to you in a zoom meeting which is conducted 1-2 weeks prior.
- 3-4 days before CFG slack channels are created and you will come to know about your team through them.
- It is recommended that you connect with your team before the main event and form a Whatsapp group.
- 2 days before CFG there will be an Icebreaking session in which you meet your teammates and team mentors in a zoom meeting.
- Be as friendly and respectful as possible with your teammates and mentors.
- Your mentors are very helpful and friendly, you can reach out to them if you need some help or anything.
- Before the main event begins the Non profit's will come along with their problem statements and your team will be given a problem statement.
- This is a 24hr hackathon in which you have to come with a good solution for the problem.
- Throughout the hackathon your mentors will do a one on one session with you and ask some questions related to maybe your project, Basic OOPS questions, Frontend and Backend questions. Try to answer them correctly with confidence.
- After the hackathon is complete you have to wait for the evaluation, in which all the teams with same problem statements are given one zoom link and you have to present your project and explain it to the judges after this from each problem statement one project team is selected and you win the Hackathon.
- **Tips:**
 1. Keep some sample templates ready (Eg: Login/Signup page, etc).
 2. When you select a techstack note that all the team members may not familiar with it so try to divide workload as efficiently as possible.
 3. MERN stack and Django are some of the most common technology that almost everyone uses, so be familiar with their concepts and build some personal projects based on it to get a good understanding.
 4. I would highly recommend to stay awake throughout the night to maximize your outputs as the next day won't give you much time as you have to wrap up.

Important Point to note:

- It is not necessary for you to win the hackathon in order to get placed in the company.
- Your interaction with your team, how much efforts you put in the hackathon, how you communicate with your mentors, everything counts.
- Your mentors will ask about the other members in the one on one session about their performance, try not to bad mouth or blame anyone and talk only about the positives of each other.
- Dont get too stressed during the process, Overall it's a fun event you get to meet so many new people and learn from them.

Best of luck Guys and Give it your best shot!!
