

JPMC Placement Experience (CFG hackathon runner up) Batch(2019-2023)

Name: Khushi Hotwani

CGPI: 8.9

Job Offered: Yes

Company Status: Dream

Criteria: 7CGPA+ & No live KT's

Email: 2019khushi.hotwani@ves.ac.in

Timeline:

JPMC RoadShow (Pre-placement Online event - Zoom)	4, 7 and 8 March 2022
Approximately 4-5 day window was given for attempting Coding Round and Interviews since the emails were sent out in batches.	
Coding Round (Hackerrank)	18-20 March 2022
Interview Round (HireVue)	26 March - 1 April 2022
Shortlist Result	09 May 2022
CodeForGood Bootcamps (GitHub, Office Hours, Presentation Skills) - Zoom	24-26 May 2022 (1 hr sessions every day)
Slack Invites	25 May 2022
BeMyApp Registration Invites	08 June 2022
JPMC CodeForGood Hackathon	11 - 12 June 2022
Final Shortlist Result	19 July 2022

***Note:** For Coding Round and Interviews the emails were sent out in batches.

Main 3 Rounds

Round 1: Coding Round | Hackerrank

Advice:

Coding questions are mostly based on,

Data Structures like strings, array, matrix, linked list, stacks, queues (you can skip trees and graphs)

Types of problems to practice (easy to medium questions on leetcode),

Basic Approaches like 2 pointer, Sliding window, Fast slow, Memoization, Bit manipulation

Questions:

1. Coding Friends

The problem reads:

“Can Kelly solve enough code challenges to catch up with Sam?”

Sam and Kelly are programming buddies. Kelly resolves to practice more as Sam is ahead initially. They each solve some problems daily. Find the minimum number of days for Kelly to have solved more problems than Sam. If Kelly cannot surpass return -1.“

It’s just a comparison of two entities and how long it’d take for one to surpass the other based on the daily increments and an initial difference. Just one while loop is all it takes. The link takes you to the same problem.

Solution: <https://www.hackerrank.com/challenges/coding-friends/problem>

2. Growth in 2D Dimensions in infinite matrix

Question:

<https://www.chegg.com/homework-help/questions-and-answers/1-growth-2-dimensions-start-infinite-two-dimensional-grid-filled-zeros-indexed-1-1-bottom--q92501293>

Solution:

See second solution on this link.

Round 2: Video Interview Round | HireVue

Advice:

Your answer for each question should be crisp and clear, to the point.

Do not stop in between while speaking whatsoever.

Be confident, your facial expressions matter.

*Note:

You can take as many practice rounds as you want before starting with the actual interview

Questions:

1. Tell us about an experience that you would describe as a learning experience. Tell us about the problem and the outcome.
2. Tell us about the specific career goals that you have set for yourself.

Round 3: Code for Good | Zoom meeting, Slack

Advice:

Choose your domain like Web App, Mobile App, AI & ML etc.

According to your domain, learn at least one framework (ex React js, Node js, Django, React Native, Flutter, MERN etc).

Keep a few basic templates ready that almost every application has (login/signup, dashboard). Learn basic Github beforehand.

Actively participate in the team and work as a team rather individually, be humble and do not try to be overconfident neither under.

***Note:**

It's a 24hr hackathon, wherein you will be given a problem statement of non profit NGO and have to come up with a solution for the same by building an application.

I had two mentors.

Regularly push your codes on github.

My One-on-one session with the mentor:

There were two sessions with the mentor (in my case both my one-on-one interviews were taken by the same mentor).

1st Session (in afternoon)-

Our team was working on Django, so first he asked to present my screen and explain the work done till now. He asked me about how we have linked relationships(one to one, many to one) of our app for the backend. What is the use of making classes in models.py file and its connection flow with other files.

While asking these django related questions he also asked SQL queries with respect to our project.

Then a few questions on Java (as he himself was a java developer).

2nd Session (at night around 12am)-

This session was more like an HR round, just to start off first he told me you must be tired by now and further he asked how you think your team members are performing? Are you facing any difficulties while working with them?

Then I asked him a few questions like the work culture of the company, techstack he is currently working on, and some other questions similar to this.

All the best, give your best shot!
