

Name : Nidhi Thakkar

Contact: 9769326454

Company : JP Morgan Chase & Co.

Email: nthakkar2010@gmail.com

Company Status : Dream

CGPA: 9.7

Eligibility Criteria : Aggregate CGPA - 7 and above, No live KT's

CTC: 17.75LPA

Job Offered : Yes

Timeline

JPMC RoadShow (Pre-placement Online event - Zoom)	4, 7 and 8 March 2022
Coding Round (Hackerrank)	18 - 20 March 2022
Interview Round (HireVue)	26 March - 1 April 2022
Shortlist Result	09 May 2022 (48 students were selected for CFG)
CodeForGood Bootcamps (GitHub, Office Hours, Presentation Skills) - Zoom	24 to 26 May 2022
JPMC CodeForGood Hackathon	11 & 12 June 2022
JPMC Final Placement Results	19 July 2022 (41 students placed)

***Note:** For Coding Round and Interviews the emails were sent out in batches.

My preparation before the process started:

4 months before the process in November, I wasn't prepared. I had solved problems during the start of 2nd year and since then I hadn't practiced for a long time because I was preparing for GATE but I knew concepts well. Still I panicked and started contacting VESIT Alumni who were placed in JPMC. I talked to 5-6 Alumni and got a gist of their preparation and their interview experience. After talking to a bunch of people I felt more confident and I started preparing myself. For 3 months I just did 1 thing - Code 5 or more problems every day.

Platform: [Leetcode](#) Language: C++

I used Top Interview Questions (It can be found under Featured List section in leetcode)

Start with easy difficulty tag first, after you are confident move on to medium ones.

It is okay if you are not able to solve problems without referring to solutions at first. You will get better. It takes time and consistency. I will suggest giving yourself 20-25 mins to understand the problem and come up with a solution, only after that dig for the solutions.

DO NOT jump straight to the solutions.

JPMC RoadShow Event

The purpose of this event was to introduce the company to students, and it proved to be a stirring experience. After the introduction, the event featured two introductory videos that effectively showcased the company's values, work culture, and growth opportunities. As a JPMC employee, one can expect ample support and mentorship, as well as an environment that fosters personal and professional growth. The presentation was so inspiring that it left a lasting impression on the audience.

Tips:

- Take note of key points during the event, as it provides insight into the type of individual the company seeks, enabling you to prepare for the interview round.
- Some students underestimate the importance of this event, but I strongly recommend attending because it serves as an eye-opener, allowing you to gain a deeper understanding of the company and its culture.

Coding Round

They gave 4-day window period to complete the coding test. Link to the test was received on registered gmail account.

We were supposed to solve 2 problems in 60 mins. 1 was easy and the other was of medium difficulty. It was a proctored test (camera was on all the time and no switching of tabs and windows) Platform: [Hackerrank](#)

Problems I got:

1. <https://www.hackerrank.com/challenges/coding-friends/problem>
2. A salesperson must sell n items in a bag with random IDs. The salesperson can remove as many as m items from the bag. Determine the minimum number of different IDs the final bag can contain after performing at most m deletions.

Example:

Input: $n=6$ ids = [1,1,1,2,3,2] $m=2$

Output: 2

Similar problem -

<https://leetcode.com/problems/least-number-of-unique-integers-after-k-removals/>

*Students who managed to solve 1 or both the problems cleared the coding round.

Tips:

- Code some problems on Hackerrank before the test so that you are familiar with the coding environment.
- Hackerrank has strict plagiarism detection. They use Moss (Measure of Software Similarity) to detect plagiarism. So avoid copying the code. For more information on MOSS - [Read this](#)

Interview Round

Students who cleared the coding round received the link to the Hirevue Interview Round.
Estimated Duration for this round: 10 minutes.

They asked 2 questions.

1. Describe a real time learning experience.
2. What goals have you set for your career

For each question, they played the video asking the question first and we were supposed to record our answer and submit it. We were given 2 attempts to submit the response. For the 1st attempt we were able to play and check our response, if satisfied we can submit it, if not satisfied we can record a new response for the same question but on the 2nd attempt it didn't allow us to review the response, it was auto submit. I was able to answer the 1st question properly but during the 2nd question I panicked even during the 2nd attempt and instead of letting the AI capture that I ended my response on a sweet note. I was worried if my response was too short. But all worked out and I got selected for the CFG Hackathon

Important things to note:

- HireVue uses AI to analyse the performance. Your body language, facial expressions, positive/negative content that you speak, Voice modulation, etc are very important.
- Sit in good posture, well dressed (I wore formals along with a blazer) and good lighting conditions.
- Make sure you look at the camera when you are speaking as if you are making eye contact with the interviewer.
- Do not stutter while speaking. Before giving the test, record yourself on camera while practicing basic HR questions. This will increase your confidence.
- Do not take this round lightly, maximum people were eliminated during this round compared to coding round and CFG.
- Be calm, don't panic. You will get 30 seconds of time to prepare your response and also another chance if you mess up the first time.

48 Students got shortlisted for Code For Good Hackathon (CFG)

INFT - 23

CMPN - 17

EXTC - 4

ETRX - 2

MCA - 2

Final Round - Code For Good Hackathon

Time	Agenda	Location
THURSDAY - The week of the event!		
5:15 - 6:30 PM	Mentor-Team Huddle	Event Webinar + Team Zoom
6:45 - 7:45 PM	Hackathon Survival Guide	Event Webinar
Saturday - Day One!		
9:00 - 10:00 AM	Opening Ceremony	Event Zoom :
10:00 AM - 11:00 AM	SGO Challenge Presentation	Parallel Event Zooms :
12:00 - 1:30 PM	SGO Office hours	SGO Zoom
8:00 - 9:00 PM	Submission Instructions	Event Zoom :
Sunday - Day Two!		
10:00 AM	Coding Cut-off	
11:00 AM	Video submission Cut-off	BeMyApp
11:30 - 1:00 PM	Technical Judging	SGO Zoom
1:15 - 3:00 PM	Final Judging	SGO Zoom
3:00 - 4:00 PM	Awards & Closing Ceremony	Event Zoom:

Before CFG Hackathon several skill enhancement bootcamps about Github, presentation, Office hours and Q&A session, etc were organized. They were very helpful for the preparation for the hackathon. Soon we received our [slack](#) invites.

They also sent a Participant Handbook - Pdf with the whole timeline and information about the hackathon stages. It was very well organized and really helpful to understand the structure of a hackathon. On the week of the hackathon we received BeMyApp invite (This is where teams are formed and all the details about the team and final code,ppts etc are to be uploaded)

3 days before the hackathon in the evening, teams were announced. I contacted my teammates on slack and formed the whatsapp group (It is suggested to use slack for communication but since communicating on whatsapp is convenient and easier for everyone, we decided to form whatsapp group as well).

After all the teammates joined the group, we discussed different technology stacks everyone knew. And we decided to go forward with Django.

Hackathon was organized for Saturday and Sunday. On thursday (2 days before hackathon) Mentor-Team Huddle was organized on zoom. This session was a Team gathering where we got to know our mentors and each other better. It was not a technical meeting. It was a general conversation about what we liked, what is our favourite series (My favourite series is Big Bang Theory and 2 of the mentors also happened to love that series) We just laughed, came up with a name for the team and they asked us to create a meme that represented our team. It was a fun Huddle.

My team:

7 Students of different colleges all over India

3 Mentors

Immediately after the Mentor-Team Huddle, a webinar about Hackathon Survival Guide was organized. This included tips and information about all the activities and selection procedures for winning teams.

On Friday, I brushed up my Django skills and started gathering basic snippets like login, signup, payment gateway, CRUD operations, etc to save time during the hackathon.

Day 1 - 11/06/2022 Saturday

In the Morning, at 7 or 8am they released the problem statements. We discussed them before the opening ceremony and eliminated some. There were 5 problem statements in total

After the opening ceremony, At 10 am SGO Challenge presentation began. All the organizations explained their problem statements and what kind of solution they are looking for. We all started noting everything down and decided our problem statements priority.

The assignment of problem statement is on first come first serve basis, so we had to be very quick in filling out the form. After some time they assigned the problem statements to every team and we got our 2nd priority - Saraswati Seva Foundation. We noted all the functionalities we decided to add to our webapp on the google docs and everyone took modules they were comfortable with.

And the coding begins, We were supposed to join zoom meet along with the mentors. On slack, there were many Subject Matter Experts (SMEs) to guide you if you are stuck with some technical glitch or if you require any technical help. They also allowed us to use Zoom breakout rooms if we decided to work in smaller teams. Because we were working with django it was easy to divide into smaller teams and develop different modules. Each team was given its own github repository. I initialized our Django project and pushed the starter files to the repository and everyone cloned and continued their parts.

In the evening, One of our mentors started taking one-on-one interviews in the zoom breakout room. The mentor was observing from the start how each member of the team is contributing.

My one-on-one interview experience:

As soon as I entered the breakout room, he first appreciated my leadership skills.

Questions he asked me:

1. Where are you from?
2. Which college?
3. What problems do you face with banks in your day to day life?
4. How can these problems be solved in your opinion?
5. What hardships did you face during your education?
6. What do you prefer , work from home or work from office?
7. How did you utilize the covid period?
8. Are you having any issues with the team?

After this, a webinar about submission instructions was organized. 2 of our teammates attended the webinar and the rest of us continued to work on our application. Late night there was fun session organized where they played games which our team decided to not attend

Day 2 - 12/06/2022 Sunday

We worked all night and finally we were done with our parts at 6am in the morning. Then we decided to merge everything first and then if time permits we were going to add more functionalities. We were very scared to merge because merge conflicts can break the whole code if something goes wrong. We all sat together and very carefully solved the merge conflicts, used a secret file to hide sensitive information and pushed everything to our assigned github repository. After this we were required to make a ppt for the presentation also we were required to shoot a video of our project and make a submission on BeMyApp. Our solution did not qualify for the final round. It is not necessary to win the Code For Good Hackathon to get placed in JPMC. The selection depends on your overall performance during the hackathon. After the hackathon and final presentations, Winners from each problem statement were announced.

After a long wait of over 1 month, the final placement results were announced. 41 students were selected. 4 out of 7 students of my team were selected.

Program	SEP
Tentative joining month [may change]	June-August
Fixed Pay	INR 13,00,000 per annum
One time Sign-on	INR 1,50,000
Relocation Lumpsum (If applicable)	INR 1,25,000
Incentive Compensation	INR 2,00,000*
Average CTC	INR 17,75,000

Tips:

- Learn Django and MERN stack before cfp since they are widely opted stacks
- Do not be dominant but also don't be a passive team member
- Contribute as much as you can and take help if required
- Express your ideas and approaches whenever possible
- Be hydrated and avoid junk food during the hackathon
- Divide and conquer but also help each other if stuck
- Be polite to other members even if they are not

All the very best! Feel free to contact me if you have any questions or concerns.
