

JPMC PLACEMENT EXPERIENCE

Name : Simran Makhija

Company : JP Morgan Chase & Co.

Company Status : Dream

CGPI : 9.31

Eligibility Criteria : Aggregate CGPA - 7 and above, No live KT's

Email : makhijas180@gmail.com

CTC: 17.75LPA

Job Offered : Yes

Role : Data Analyst (Specific domains are assigned post joining)

Software Engineering Program (SEP) through Code for Good (CFG)

Placement Process :

- Coding Round
- Interview Round
- Code For Good Hackathon

JPMC RoadShow Event:

It takes place before the placement process starts. This event served the objective of introducing the company to students, and it was an inspiring experience. Two promotional videos that displayed the company's beliefs, work culture, and career prospects were shown after the introductions. As a JPMC employee, one may anticipate a supportive atmosphere that encourages both professional and personal development.

Dates: 4, 7 and 8 March 2022

These speeches usually offer you a sense of what the firm expects from its workers, what it's like to work there, and much more, even though the event may not first seem as exciting. This is what I ultimately chose to include in my video interview.

Tip:

Make notes of what the Company is looking for as it will ask you to prepare for your Interview.

Coding Round :

Round 1 was a coding test that took place in the 6th semester in the 3rd year. These were Questions related to Strings,array,linked list,stacks and queues. Mostly the questions are based on Strings and Arrays.

- The coding round is conducted on **HackerRank** platform.
- A window period is given for accessing the test link.
- This is a programming test of 100 marks having 2 programming questions carrying 50 marks each.
- There is no negative marking so try to attempt both the questions with passing maximum test cases.
- The time allowed is 60 minutes.
- The test is **proctored**. So avoid copying and looking for solutions here and there.
- You must always have your camera turned on. The system periodically takes a picture of you, so be sure you're seated somewhere with good lighting.
- You can write both the codes in different programming languages like C, C++, Java and Python.

Questions :

1. Ad Rotation
2. Kth Occurrence

Interview Round :

In your HireVue interview, you will be asked to record video responses to a series of interview questions. One opportunity will be provided for you to re-record each response, if you choose. The re-recorded response will be automatically submitted as final.

There were two common **questions** which were asked from everyone :

1. Tell us about an experience you have had, that you would describe as a learning experience. Tell us about the problem and the outcome.
2. Tell us about the specific career goals that you have set for yourself.

Important things that you should keep in mind :

- The interview round takes place on **Hirvue** platform.
- Try to avoid answering in the form of your personal life experience, problem and outcome.
- Answers should be related to internships or technology related.
- Try to use more **Technical** terms.
- Express your technical skills and communication skills in some or the other form.
- Be as confident as you can be.

- Always make eye contact i.e look at the camera(don't look on the screen or here and there) while answering the question.
- Dress formally.
- Make sure you can be seen and heard well by sitting in a well-lit area. You will have all the options necessary to test these things out.
- You have 30 seconds each to PREPARE for a question, which means you can make a note or consider the response.
- Do not hesitate and jumble your words. Try to be honest and make your answers sound real.

Shortlisting Post-Interview Round

It's been a long anxious wait after clicking that final Submit button on Hirevue. **41 days** after the video submission, an email dropped on my inbox from the staff placement coordinator with a Google Sheet comprising the list of shortlisted candidates.

Total Shortlisted Candidates: 48

INFT - 23

CMPN - 17

EXTC - 4

ETRX - 2

MCA - 2

Code For Good Hackathon :

Code for Good is a hackathon that brings together student technologists and JPMC volunteers together with social good organizations to solve real-world problems using technology. It is an annual hackathon event in which they partner with non-profit organizations to solve real-world problems using technology.

Timeline :

Saturday – Day One!

9:00 AM – 10:00 AM	Opening Ceremony!
10:00 AM – 11:00 AM	SGO Challenge Presentations
12:30 PM – 2:00 PM	SGO Challenge Office Hours
8:00 PM – 9:00 PM	Submissions Guidelines Information Session.

Sunday – Day Two!

10:00 AM	Coding Cutoff
11:00 AM	Project Video Submission Cutoff
11:30 AM – 1:00 PM	Technical Judging Round
1:15 PM – 3:00 PM	Final Judging Round
3:00 PM – 4:00 PM	Closing Ceremony!

Program Structure :

- Each participant will be divided into teams of 7-8 members where you can collaborate to come up with a collective solution.
- You will be assigned two Team mentors who will be closely working with your team and helping you facilitate your innovation process. One team mentor will be with you from morning till evening and then in evening, the second mentor will join you to proceed the hackathon process.
- In case of any technology related concerns, we can contact Subject matter Experts which are there for us throughout the event.
- There are 4 important platforms on which this event takes place : **BeMyApp platform, Slack, Git and Zoom.**
- BeMyApp : For video submission; Slack : To ask for help; Git : to continuously deploy and integrate your code with all of your team members and lastly Zoom : To interact with your team mentor and team members.
- The problem statement you will be given will be decided on the basis of first come first serve.
- As you are given only 24 hours, you are expected with a demo of some sort, with a powerpoint presentation.
- Judging Criteria : Fit to NGO challenge/need, quality of pitch, level of innovation and technical development.
- A Technical Round will be held in which you will be given 7 minutes. Take minimum time for presentation and utilize more time for giving a demo.

- Learning a few popular tech stacks like **MERN** can come in handy since that's what a lot of teams end up using. I'd recommend learning **React**, and **Django** and working with Databases like **MySQL** and **MongoDB**.
- Be interactive throughout, present your opinions ,include your dormant teammates into the discussions,don't try to be a leader or compete among teammates but if no one is taking the initiative then be the first to do so.
- Try to contribute as much as possible and make worthy contributions.
- Make sure your team continuously integrates the frontend and backend code.
- In between the process, one-on-one interview can be held which can be Technical or HR based. Try to be honest and confident.
- Try to remain calm, eat food and enjoy the process.

**FORGET EVERYTHING AND JUST DO YOUR BEST,
ALL THE BESTT!!!**
