

JPMC Placement Experience
Batch(2019-2023)

Name : Sristi Sharma

Job Offered : Yes & Accepted

CGPI : 9.32

Criteria : 7CGPA+ , No active backlogs.

Email : sristis260@gmail.com

Contact Number : 8879693780

Linkedin : <https://www.linkedin.com/in/sristi-sharma-260305154/>

TimeLine:

JPMC RoadShow (Pre-placement Online event - Zoom)	4, 7 and 8 March 2022
Approximately 4-5 day window was given for attempting Coding Round and Interviews since the emails were sent out in batches.	
Coding Round (Hackerrank)	18-20 March 2022
Interview Round (HireVue)	26 March - 1 April 2022
Shortlist Result	
09 May 2022	
CodeForGood Bootcamps (GitHub, Office Hours, Presentation Skills) - Zoom	24-26 May 2022 (1 hr sessions every day)
Slack Invites	
25 May 2022	
BeMyApp Registration Invites	
08 June 2022	
JPMC CodeForGood Hackathon	
11 - 12 June 2022	
Final Shortlist Result	
19 July 2022	

About Rounds :

Round 1:

If you have practiced enough with leetcode, then the coding round would have been easy for you, with only two coding questions at a relatively low difficulty level. It was a straightforward task.

Q1: Given a string of characters 'S' and 'T', replace all S's to T (S->T) and all T's to S (T->S). Print the reverse of the modified string.

Q2: <https://www.geeksforgeeks.org/closest-numbers-list-unsorted-integers/>

NOTE:

- Your camera has to be switched on at all times during the test.
- Hackerrank has strict [plagiarism detection software](#) which can easily identify whether your code is original or not.

Round 2:

The email containing the link to participate in the second round was sent to us promptly, along with guidelines on how to proceed. The interview platform employed for this round was Hirevue, which utilizes AI technology. It takes into account various factors, such as the candidate's level of confidence, facial expressions, vocal tone, and lighting, which significantly impact the interview's outcome. It is advisable to conduct some preliminary research on the platform before appearing for the interview.

Questions :

1. Tell us about an experience you have had, that you would describe as a learning experience. Tell us about the problem and the outcome.

My Answer: I talked about one of my recent hackathon experiences. My answer

focused on Team Management, quick thinking and maintaining positivity throughout no matter the pressure.

2. Tell us about the specific career goals that you have set for yourself.

My Answer: My answer focused on the technical skills I expect to gain from working in JPMC (your answer should signify that you are eager to grow and learn in the company). Along with that, to inculcate leadership skills and enough technical expertise so that I can also be a good mentor when needed.

Note : There were 2 attempts for each question. Time limit for each question was 1 min 30 secs.

Round 3: Code For Good(CFG)

As a result of the COVID pandemic, the upcoming round was entirely virtual. This round entailed a 24-hour hackathon, where five non-governmental organizations presented their problem statements. Participants were required to submit their preferred problem statement, and based on the collective preferences, one final problem statement was selected for the round.

- [SGO](#) Assigned - **Bangalore Foodbank**

- Team No. 85

- Team Size - **8 (later reduced to 6, since people dropped out)** ● No. of Mentors -2

→ On June 9th, our team members were released, and we promptly utilized LinkedIn and Slack to communicate with one another. We established an unofficial WhatsApp group that lacked any mentors, and before our mentors joined us, we met on GMeet to introduce ourselves and discuss our respective technological backgrounds. We ultimately selected the MERN stack and Django/Python backup Tech Stack for the hackathon. Participants who were unfamiliar with these technologies were given supplementary materials to prepare beforehand.

Team 33 PPT

(If you need ppts of other teams, then don't hesitate to contact me I'll share it with you).

UNDERSTAND PROBLEM STATEMENT:

→ Be clear with the problem statement

→ Clear your doubt then and there itself so that you can start brainstorming asap.

→ Discuss ways to solve it along with opinions of mentors ,don't hesitate,they are there to help.

TECHNICAL TIPS :

- Be ready with code templates of certain reusable components such as login,signup,backend server structure ,request response skeletons ,authentications.
- Early Planning is extremely important, especially if you want the problem statement you desire. Cooperate with your teammates as soon as the problem statements are public. We did all our planning on a [simple sheet](#).
- Be familiar with what are you incorporating and why are you using a particular concept/code script not in depth but superficial knowledge would be great.
- Be on the same page make sure your teammates have a clear idea of how the project will proceed,what is expected and what is used for what .
- If you are stuck somewhere or facing errors and bugs don't waste time and immediately call SMEs and resolve errors
- Learn a few popular tech stacks like MERN can come in handy since that's what a lot of teams end up using. I'd recommend learning React, and Django and working with Databases like MySQL and MongoDB.

OTHER TIPS :

- Take breaks no issues ,but be sure you are always on earphones as mentors can call you any time ,or inform teammates before leaving so there's no miscommunication .
- Be interactive throughout, present your opinions ,include your dormant teammates into the discussions,don't try to be a leader or compete among teammates but if no one is taking the initiative then be the first to do so.
- Keep mentors in the discussion and make it lively .

- Try to contribute as much as possible and make worthy contributions .
- Assign your teammates tasks,if a teammate needs help take some time and do it ,it all counts mentors observe you majority of the time .

Rest everything is chill and no need to worry if you have reached till CODE FOR GOOD
You are 90% closer to selection ,just follow above tips and you are good to go .

Note: Winning or being a finalist is neither necessary nor a guarantee that you will be given an offer by JPMC. So, do not get disheartened, if you cannot get to the finals.Also There is also a chance of you not getting an offer,so start preparing for the aptitude test of other companies.

All The Best :)
