

Name:Kunal Khandelwal
Branch: INFT
Company:MAQ Software
CTC:7.5LPA
Offer received:Yes
Date:15 Sept 2023
Location:Andheri,Mumbai

Recruitment Process:

1. Online Test

Platform: mettl.

Duration: 1 hour 30

No. of questions: there were almost 20 to 25 MCQ questions distributed among different sections and the count of the questions were not fixed in each section. apart from this, there were 4 coding questions. You can switch between the sections.

Aptitude question: include reasoning questions and numerical ability

Technical MCQ: mostly have questions from OS, DBMS, CN, and DSA.

Coding question: there were 4 coding questions, the first 2 questions were array-based, remaining two were from backtracking and Dynamic Programming. The level of the questions was easy to moderate.

2. Interview

It was started with pre placement talk followed by interviews

After the test 30 students were selected for an interview . Some students' interviews were online and for others it was offline which happened in college.

There were 2 employees from company for offline interviews both were females. One was taking technical part other one was talking HR

To get placed you need to cover both the interviews.

My interview was directly with HR. It started with a short introduction and then she asked me about cet marks, followed by explaining about myself which include skills ,project etc everything I have written in my resume . I carried my laptop with me (not compulsory actually I was the only one to carry a laptop) because I wanted to show her my deep blue project. If you don't know about it you can refer to this <https://deepblue.co.in/>. Our college also participates in it every year and I came 3rd in it. And ma'am(HR) liked the project because in their company they are also working on similar project . I explained every part of the project to her and also answered all questions related to the project confidently .I think she liked it. round lasted for around 20–25 mins and was mostly focused on my resume

Finally she asked do you have any questions to ask

Then I asked how your transition from campus to corporate was. Did you face any challenges? Coincidentally MAQ CEO wrote a book on his transition from campus to corporate. Selected students were given this book. In the end they selected 7 students, 2 were from IT.

Note:

1. Study about MAQ Software in terms of what they do, their CEO etc, as any company would expect.
2. MAQ is in analytics. They worked closely with Microsoft and have 1 office in the US and 3 in India.
3. Focus more on SQL (they asked medium level queries in SQL) rest is mostly fundamental about OOPS, sorting algo, DBMS, easy program like reverse string in Java etc
4. If possible, carry a laptop to show your projects (If you have done a really nice project it can be anything academic or non-academic) in interviews it makes a good impression.
