Package: 8.5 (6.5+2)
Job Offered: Yes
Role Offered: Business Analyst

There were no eligibility criteria. 65% in 12th and 10th and no live KT's.

Roud Details:

Round 1 - Aptitude Round

7 sections:

1. Quants and logical
2. Verbal - English
3. Technical (questions on C, Java, DSA)
4. html, CSS, Javascript
5. Probability Questions
6. ML and pandas
7. Coding Question - 2 (Array/String and trees)

A set amount of time was granted for each section, and moving between them was not permitted. Mettl was the subject of the test. This round included machine learning and analytics-based questions in addition to the typical quantitative and logical questions that are posed in aptitude tests to assess a candidate's suitability for each of the roles that the company offers.

Candidates will be interviewed for each position according to how they do in each section.

Round 2 - Technical Interview Online

This interview went on for 30 mins, it took place on Superset, the platform where they took our registrations. The selects were scheduled with different panels, we would receive a message (SMS) and mail 30 -40mins before our interview. In my case, I was shortlisted as a Framework engineer, but I was much more inclined toward the role of Business Analyst. For that, I had to sit through 2 cross panel interviews.

The first one took place in the first slot itself. There I had to tell the interviewer about my inclination. She took permission from the higher authorities and then conducted my interview.

Questions asked were:

1. Puzzles. They want to test your ability to solve questions, even the trickiest of them. Two puzzles.
2. Excel. As an Analyst, one needs to have full knowledge of how to effectively use MS Excel. They asked about some of the shortcuts and basic concepts.
3. SQL. Basic Joins and Queries. They dug deep into it as I was being judged for the role change.

4. Lastly, they asked about some of the projects I had listed in my resume.

Tips: a) If you are interested in a Role Change, don't hesitate to request, but do it politely.

b) Even if you don't know a particular answer, be graceful and careful while handling the situation.

c) Don't fake your resume.

After my interview, I was told that the shortlist for a cross-panel interview would be out shortly and that I had to be ready for another interview.

After 3 hours the list was out and I was shortlisted.

In the second interview, the interviewer tried to understand my way of thinking by giving me certain "what would you do if..." scenarios. She dug into my resume to understand my projects. The 2nd interview was more of my personality assessment and resume based.

Round 3 - Offline HR Interview

Look up the interviewer on LinkedIn, if you have the name. It'll help you in understanding what they might be expecting in an ideal candidate. Take a hard copy of your resume inside the interview room.

Prepare a good intro, not the basic "My name is...", be creative in introducing yourself.

The interview was more like an exchange of ideas and a discussion. Be confident in presenting yourself.

Know about the company in detail, from the logo to the products and what they do.

Questions about the resume, and projects. The projects can be asked to design for real-life applications too.

Real-life "what-if" scenarios were asked. There are no right answers to it. But just be open to suggestions while answering these types of questions. Sometimes the interviewers try to tangle you in the situation.

Have some very insightful and valid questions ready with you as they can ask for them multiple times in the interview.

The interview lasted for around 45mins to 1 hour.

Just be confident.
