

Name : Shivam Singh

Class : D20B

Job Offered : Machine learning Engineer And accepted

CGPI : 9.25

Package : 8.5 (6.5 + 2) lpa

There were no eligibility criteria as such. 65% in 12th and 10th and of course no live KTs.

Round Details -

Round 1 - Aptitude and Coding round :

Mainly divided into 3 sections -

1. Quants , logical verbal ,etc. (IMP for Business analyst role)
2. Probability , graph based , ML and pandas based mcq (IMP for Machine learning role)
3. 2 Coding Questions (IMP for both Machine learning and Framework Engineer role)

There was a set amount of time granted for each section. Mettl was the Platform of the test. Candidates will be interviewed for each position according to how they do in each section.

Round 2 - Technical Interview (Online) :

This interview went on for 30 mins, it took place on Superset platform. The selects were scheduled with different panels, we would receive a message (SMS) and mail 30 -40mins before our interview.

Questions Based On: Simple machine learning questions like what is activation function,knn ,k means,understanding of how CNN or other ml algos work

Simple DSA based Questions (may ask you to code it and it's fine if you make a mistake as long as you convey your approach properly).

Average level coding questions were asked , try to explain your approach first then code it and first tell a slow solution then optimize it there to make the person think you can come up with such solutions and adapt to conditions.

In the end ask about company and what sort work will you will be doing if selected and feedback over your knowledge of coding and your job role

Note :- In this interview you may mention to the interviewer if you want to opt for a different role than that for which you are selected for the interviewer will arrange a new interview with a different panel of respective roles

Round 3 - Tech + HR Interview (Offline):

- ❖ Introduction
- ❖ Resume-based questions - You must be good at what you have mentioned, hence only mention the project and topic which you really know. You maybe asked about what techstack and why you chose it and any other alternative. Time complexity of most popular algorithms like kmeans clustering, SVM etc
- ❖ Riddles - Here your main answer is not that important but your approach. Even tho for machine learning I wasn't asked any sort of riddles.
- ❖ Maths: You need to revise once basic graphs and calculus based concepts cause

they maybe asked. I was asked on graphs and a little about how calculus is used in machine learning.

❖ Coding Questions - I was asked a basic PnC maths question first he asked to solve the maths part then made few changes and told to just tell me approach in maths and not final answer as answer was very huge, then after i successfully solved that question i was asked to code it and then optimize it.

❖ Question to them - interviewer will ask you if you have any question for him there you can ask him question regarding the company make sure you have a basic knowledge of the company and ask a good question so that the interviewer will get an impression that you are really interested in the company.

.

HR round:

This round was a little different than what i expected. While i was waiting for my interview (tech), Outside in lobby , an hr rep came and sat beside me and told me she just wanted to have talk, Turns out that was HR interview(probably) as I didn't have any formal HR interview so be Aware. She told me to explain in tech language on how ML works and asked a Business Analyst about how he can explain in simple words what I just did .

Try to impress the HR by being entertaining and polite and dont be like me who was kind of ignoring her while revising. Tell her about the hobbies you have mentioned in your resume.

She may ask for proof if you have written extra ordinary stuff. I had written about wildlife so she asked me about it and wanted to see pictures of what all wildlife i have explored after seeing them she seemed to be okay with what I had written and moved on.
