SUMMARY

As an undergraduate studying AI and data science, I'm keen on exploring new technologies to grow. I'm eager to apply my skills for personal growth and contribute to the company's success and societal impact. Collaboration is key for me as it offers the chance to learn from diverse teams and make a positive difference.

EDUCATION

- Bachelor of Engineering (Artificial Intelligence and Data Science)** *Dec 2021 – Present*
Vivekanand Education Society's Institute of Technology, Chembur, Mumbai **CGPA – 9.18 (aggr.)**
- Class 12th – MSBSHSE** *June 2019 – April 2021*
Dnyanjyot Junior College **Percentage – 88.69%**
- Class 10th – CBSE** *April 2015 – March 2019*
Don Bosco Senior Secondary School **Percentage – 90.2%**

SKILLS

- Languages:** C, Python, C++
- Database:** MySQL
- Web Development:** HTML, CSS
- Frameworks:** React, streamlit
- IDE's:** Jupyter Notebook, VScode
- Machine Learning**

WORK EXPERIENCE

- Project Trainee** *May 2024 – July 2024*
Bhabha Atomic Research Centre (BARC)
- Measurement of Insulated Pipe Thickness**
 - Implemented various machine learning models to predict insulation pipe thickness.
 - Conducted denoising and feature extraction using TSFEL to enhance model performance.
 - Performed feature importance analysis and hyperparameter tuning for optimization.
 - Created a Streamlit app enabling users to input data folders and apply machine learning processes.
 - Integrated functionalities for denoising, feature extraction, correlation analysis, model selection, and hyperparameter tuning.
 - Enhanced the app with the addition of deep learning models for advanced predictive capabilities.

PROJECTS

- Diabetes Prediction - ML Project**
 - Created a system that takes certain inputs from user and predicts if the person has diabetes.
 - ML model which makes predictions with working website access to it.
 - Working on adding meal recommendation for diabetic patients and deployment.
- Cake Shop Website - WebDev Project**
 - Created a dynamic cake ordering website for a bakery using HTML, CSS, JavaScript, and React.js, providing an interactive platform for customers to explore and order customized cakes
- Checkers Game - Python Project**
 - 2 player game in which one of the player is the AI bot and applied minmax algorithm.

VOLUNTEER

- Youth Organization in Defence of Animals (YODA)** *August 2023*
 - Engaged in NGO's stray animal welfare project in August 2023, collaborating within a dedicated team. Demonstrated compassion through impactful interventions - feeding, medical care, adoption drives, and awareness campaigns. Showcased strong commitment to fostering a compassionate society.

CERTIFICATION

- [Fundamentals of Deep Learning](#) - NVIDIA
- [Anomaly Detection](#) - NVIDIA
- [EDA for Machine Learning](#) - IBM
- [AWS Academy Cloud Foundations](#)

PUBLICATION

- Tipu Sultan, T. V. Shyam, S. K. Apraj, Priyanka Amrute, Disha Bhat, Mehvish Khan, Sneha Naik: Machine Learning based Insulated Pipe Thickness Measurement using Eddy Current Technique. (Paper under review [associated with BARC]).
