PROFILE SUMMARY

I am a dedicated and ambitious individual with broad experience in developing, debugging, and testing. I can handle multiple tasks on a daily basis and seeking a position in a growth-oriented company.

EDUCATION

Bachelors Degree in Computer Engineering, Vivekanand Education Society's Institute of Technology, Chembur	Expected 2025 CGPA 9.16
Higher Secondary Education, Pace Junior Science College, Thane	2021 79.67%
Secondary Education, Sacred Heart School, Kalyan	2019 83.20%

SKILLS

Soft Skills	Problem Solving, Team Work, Time Management, Adaptability
Programming Languages	Java, C, C++, Python, PHP, SQL, JavaScript, HTML, CSS
Tools and Technologies	Figma, Selenium, Postman, MYSQL Workbench, VS Code, Sublime, GIT
Frameworks and Libraries	Laravel, TestNG, Cucumber, React, Webpack, jQuery, SQLITE, PostCSS

INTERNSHIP/EXPERIENCE

Jay innovations (Software Developer)	Mar 2024 - May 2024
Worked on a real-time auctioning platform and integrated websockets for live updates. Also enhanced existing ERP softwares by adding features like announcements, Excel imports, user activity tracking , and much more.	
Fluid Tech (Software Developer)	Nov 2023 - Jan 2024
Developed a fees management system using Laravel , automating tasks and enhancing record tracking efficiency by 80%. Features included student-batch enrollment with payment/refund processing, invoice mailing , professor management, and Excel import/export, resulting in a 60% operational efficiency improvement.	
StudyLink Tech (Software Developer)	Jun 2023 - Jul 2023
Developed an SAP software solution using Agile methodologies with Scrum , integrating Trello for efficient task management and Git for seamless team collaboration. This platform streamlined interactions among clients, vendors, manufacturers, and transporters. Furthermore, it incorporates essential features such as inventory management , contract management, orders management, cart functionalities, optimized mail services , and much more.	

PROJECTS

Talk Time 🔗	Java Socket Collection Framework Security
A Java-based client-to-client chat application built using socket programming and a custom DES encryption algorithm for message security. Implemented a multi-threaded environment and XML formatting as a standardized communication between client and server.	
OS Algorithm Simulators 🔗	HTML CSS Javascript OS
A web-based system encompassing a page replacement algorithm demonstration (FIFO and LRU) and a CPU scheduling simulator featuring algorithms like FCFS, Round Robin , etc. all commonly used by operating systems. The simulator provides Gantt charts and detailed metrics such as Turnaround Time and waiting time for analysis.	
Quill Plus E2E Testing 🔗	Cypress Cucumber
Automated E2E testing of Quill Plus website's practice test flow using Cypress , covering user authentication, practice test attempts, and real-time result validation.
