PROJECTS

Insignia — Indian Sign language (ISL)

- Worked with a team of four using PyCharm to develop a *machine learning* model using **Python** to facilitate learning and understanding of Indian Sign Language (ISL).
- Integrated deep learning model like **CNN** with **OpenCV** image preprocessing to achieve accurate gesture recognition.
- Created an intuitive GUI using **Tkinter**, enabling seamless interaction and user-friendly experience.

KiddoShield

- Worked with a team of four using VSCode to develop KiddoShield, a child vaccination website educating parents on vital vaccines and enabling effortless booking for their children.
- Leveraged **HTML**, **CSS** and **JavaScript** for frontend development, while utilizing **MongoDB** and **Express** for backend functionalities.
- Implemented features such as appointment scheduling, location services, timely reminders and informative blogs.

Attendify

- Worked with a team of four using PyCharm to develop a *machine learning* model using **Python** for automatic attendance management.
- Utilized **Haarcascade** for face detection and **LBPH** for face recognition to identify students.
- Created an intuitive GUI using **PyQt5** and Integrated **SQLite** for efficient database management.
- Implemented functionalities to capture attendance, update records in an Excel sheet, calculate overall attendance percentages, and generate a defaulter list.

Udemy-Clone

- Developed a Udemy-clone Android application with **Flutter** and **Firestore**, featuring comprehensive course details and Wishlist functionality.

ACHIEVEMENTS

Runner-up in Looking Beyond Syllabus

Intra-collegiate competition for showcasing projects of software and hardware. Contributed in the development of the front-end for a crop recommendation system using machine learning and data analytics.
