Work Experience

Prodigy Infotech — Data Science Intern

Nov 2023 - Dec 2023

- Throughout my tenure as a data science intern, I tackled real-world data obstacles head-on, implementing advanced methodologies to address practical challenges. Subsequently, I received a Letter of Recommendation from the esteemed company, acknowledging my exemplary performance during the internship. This experience provided invaluable hands-on exposure to real-world data analytics, further enhancing my skill set and problem-solving abilities.

Knowledge Solutions India (KSI) — Data Analyst Intern

Dec 2022 - Jan 2023

- During an intensive training-internship program at KSI, I gained practical experience in real-world data analytics. Collaborating with my team, we conducted a detailed analysis of Walmart's stock performance, identifying key factors influencing profitability. This experience honed my skills in problem-solving and data analysis.

Projects

Accident Prevention and Management System — IOT, ML & Flask

- Project involves building an accidents prevention and management system. We utilize real-time data from IoT devices like waterproof temperature sensors and ESP32 WiFi modules, which transmit data directly to our database. Our system offers real-time data visualization and predictions. Upon exceeding temperature thresholds, automated alerts are dispatched to relevant authorities.

Warehouse Connect — React.js & MongoDB

- Part of the Warehouse Connect initiative, we utilized Next.js for frontend development and MongoDB for backend infrastructure. The project's objective was to optimize surplus food distribution by linking vacant warehouse spaces with stakeholders in need. This initiative aimed to reduce food waste and enhance supply chain efficiency.

Blood Donation Management System — MERN Stack

- The project's primary objective is to establish a robust system for the efficient management of blood donation camps, encompassing comprehensive data management for various blood group availabilities. This initiative also incorporates stringent user verification and authorization mechanisms to ensure secure access and operation.

Technical Skills

- Languages:** Java, Python, C, C++, JavaScript
- Backend:** Node.js, Express.js
- Frontend:** React, TailwindCSS, HTML, CSS, Bootstrap
- Databases:** MySQL, MongoDB, Firebase
- Web Technologies:** Docker
- Developer Tools:** Postman, VS Code, GitHub

Certifications

- Data Science Internship Certificate** (Prodigy Infotech)
- Applications of AI for Predictive Maintenance** (Nvidia)
- Applications of AI for Anomaly Detection** (Nvidia)
- Machine Learning with AI using Python Internship** (KSI Partner with Microsoft)
- Webathon Participation Certificate** (Microsoft Student Developer club)
