C++ | Java | Python | Machine Learning | JavaScript | MySQL | Django | Flask | Git | Bootstrap

## Projects

---

### CMS detector quality assurance using ML methods

A research project based under the guidance of **TIFR**, it includes the quality assurance of the components of the PCB using ML algorithms.

- Designed and developed a Tkinter application for quality assurance of PCB board components, compatible with both Windows and Ubuntu operating systems.
- Implemented functionality to fetch 92 holes from the PCB board and process them using YOLO object detection model, trained on a dataset generated using Roboflow, to accurately detect signal pads.
- Integrated documentation features within the application to record and document parameters related to the quality assurance process, ensuring comprehensive tracking and analysis of component inspection results.
- Collaborated with stakeholders to gather requirements, design user interfaces, and iterate on feedback to deliver a user-friendly and efficient solution for PCB board quality assurance.

## Blog

Developed a secure, scalable, multi-user web application with integrated database functionality for efficient data management.

- Developed a CRUD-based blog project using Flask, HTML, CSS, and Bootstrap, enabling users to create, read, update, and delete blog posts.
- Employed Flask-SQLAlchemy for streamlined database management and query execution, optimizing application performance and scalability.
- Implemented user authentication and authorization features for secure access to the blog, including user registration and login functionalities.

### Analyzing Android App Store

Conducted analysis of Android apps on Play Store using Pandas and Plotly to visualize category diversity, assess market competitiveness, and recommend pricing strategies.

- Extracted, cleaned, and processed Play Store data using Pandas to ensure accuracy and reliability of analysis.
- Analyzed competitiveness of app categories based on number of apps, ratings, and user reviews to assess market saturation, predict the revenue that can be generated.

## Education

---

### Vivekanand Education Society's Institute of Technology, India

2021 - 2025

- Bachelor of Engineering (B.E): Computer Engineering | CGPA: **9.61/10**

(expected)

### Pace Junior Science College, India

2019 - 2021

- *MSBSHSE (Class XII), Percentage: 91.33*

### B.K. Birla Public School, India

2007 - 2019

- *CBSE (Class X), Percentage: 95.40*

## Academic Participation

---

- Finalist in ATS: Awakening the Scientist (2022)
- Finalist in Praxis Hacks Technical Hackathon (2023)
- Deepblue Hackathon (2024)

## Internship

---

- [Knowledge India Solutions: Data Science and Analytics using python](#)

## Certifications

---

- [SQL Badge: Leetcode](#)
- [Cisco Networking Basics](#)
