anmolgyanmote@gmail.com ♦ [LinkedIn](#) ♦ [+91 9653242546](#) ♦ [GitHub](#) ♦ [LeetCode](#)

SKILLS

Languages: Java, Python, C, JavaScript
Frontend: HTML, CSS
Backend: MongoDB, MySQL
Course: Data Structures, Software Engineering, CyberSecurity, Computer Networks, DBMS, Java

EDUCATION

SSC
Bal Bharati Public School 2018-19(96.8)

HSC
Bal Bharati Public School 2020-21(95.6)

Bachelor Of Engineering(Computer Engg) -Mumbai University
Vivekanand Education Society's Institute Of Technology 2021-2025 (CGPA 9.0/10)

EXPERIENCE

Mazagon Dock Shipbuilders LTD -Cybersecurity Training Nov 2023 - Dec 2023

- Proficient in configuring and managing firewalls to enforce network security policies, control incoming and outgoing traffic, and prevent unauthorized access to sensitive information.
- Skilled in implementing and maintaining antivirus solutions(Symantec) to safeguard systems and networks against malware threats, including viruses, spyware, and ransomware.
- Proficient in utilizing VMware virtualization technology for creating, managing, and securing virtual environments, optimizing resource utilization, and facilitating efficient deployment of applications and services.

JIO Platforms Limited Mumbai Jun 2024 - Jul 2024

- Worked on the project titled "BRD to Test Cases and User Flow Diagram."
- Created a frontend service in React to generate Test Cases & Scenarios and User Flow Diagrams from BRD using local LLM Ollama3, successfully achieving the project objectives

PROJECTS

Test Case Generator/ChatBot

Developed a dynamic web application utilizing React, Python, and JavaScript, incorporating various frontend and backend services. This website allows users to upload a Business Requirement Document (BRD) and input a prompt. The system then generates and returns test cases, test plans, and test scenarios, functioning similarly to a chatbot for automated test management.

Restaurant Website

Crafted a dynamic restaurant website with seamless navigation and engaging visual design. Utilized secure data handling protocols for online reservations and payments. Implemented intuitive menu browsing and ordering functionalities, enhancing customer experience and streamlining restaurant operations.

Video Metadata generation and Classification

This project makes use of NER, object recognition speech recognition, etc. techniques to generate metadata from the videos and this metadata can be used for training the deep learning models. This project would try in providing a way using various models of deep learning to categorize ISRO videos with a proficient accuracy.
