PROJECTS

E-Healthcare System (Sem 3)

- A website that would digitize patients' data sharing between hospitals, With the aim of time management and reducing human efforts a lot of time can be saved in emergency treatment of a victim undergone an accident by not unnecessarily providing basic details of the victim these basic details can be accessed directly through the patients UID(unique id) in a very short time.

Automated Student Assistant using Python (Sem 4)

- Automated Student Assistant using Python an Automated Chat bot that gives a desired output in the form of responses/message to the new students ahead of their queries regarding their Institution. About 55% of Freshers hesitate to communicate with seniors/staff regarding their queries about institution. ASAP is a one stop solution for students helping them solve their problems.

Blog Diary Entry (Sem 4)

- A Blogging website created using **Django** framework(python), where a user can add his daily blogs and which would appear on the front page of the web application in a descending fashion. User can even edit the blog entries. Thus creating a records of blogs.

Fund Upstart (Sem 5)

- A web application created using **Nextjs-13**, which is a platform which fills the gap between Founder(Startup) and Investor. A platform where a Startup and Investors registers themselves and if the Investor likes the project of startup, he invests in it and the payment is carried via us as a intermediate.

Optical Character Recognition (OCR) (Sem 6)

- A Machine Learning based project which was handed over to us by **Palcoa Solutions pvt. ltd.** with an aim to digitize the readings of pharmaceutical instruments by applying various API'S provided by service providers like Amazon AWS, Google Vision and Vertex api's etc.
