About Me

Hard working and focused individual, ardent towards exploring new technologies. Dedicated towards acquiring new skills and knowledge for contributing towards innovative projects.

Education

Vivekanand Education Society's Institute of Technology, Mumbai <i>B.E. in AI & Data Science, Honours in Cybersecurity</i>	Current CGPA: 9.53 Dec 2021 – May 2025
Christ Academy, Navi Mumbai <i>Completed HSC Class 12 with Distinction</i>	Percentage: 97.67% July 2021
Christ Academy, Navi Mumbai <i>Completed SSC Class 10 with Distinction</i>	Percentage: 89% May 2019

Technical Skills

Languages: Java, Python, C/C++, SQL (MySQL), JavaScript, HTML/CSS
Frameworks: Web Apps - React, Node.js, Flask, Next.js, Express.js; Other - OpenGL, glfw, scikit-learn, keras
Tools: Git, GitHub, AWS, Docker

Experience

ML Intern/Data Science Reliance Industries Ltd. - <i>RCP, Ghansoli</i>	May 2024 – July 2024
- Worked on Gas Sales Forecasting by using ML techniques using various technologies including scikit-learn, keras/tensorflow for forecasting the gas production. - Also, made use of Angular, Openai API and Selenium for implementing a RAG based system for Dashboard Analysis & Interpretation	
Jr. Technical Officer ISTE-VESIT - <i>Chembur, Mumbai</i>	Jan 2023 – Present
- Speaker for a workshop on React, Flask & creating recommendation system which was attended by 100+ people - Developed a full-stack Web App: Spotify Clone, using Flask & React which included a basic recommendation system - Maintaining the society's website which contains information about the events and activities that were conducted - Speaker for a workshop on creating & publishing an AR Game using Meta's Spark AR - Conducted a 24 hour hackathon involving more than 400 participants	
ML Research Intern Spartificial - <i>Remote</i>	May 2023 - July 2023
- Worked on the Research Project titled: Detecting Volcanoes on Venus - Built a CNN based Object Detection model using transfer learning built upon YOLOv3 model. Report Link: Detecting Volcanoes on Venus - Created a labelled dataset of Volcanoes on Venus from the available images from NASA's images of Venus - Used knowledge of Linux commands to perform file operations quickly while creating the dataset	

Projects

NeuroCogniTrainer <i>React, Node.js, Express, MongoDB, Unity</i>	Project
- Developed an integrated system aimed at enhancing cognitive retraining for children with developmental disabilities - Implemented features that provides retraining to the patients in the form of interactive games using Unity - Developed systems for therapists to assist them in making more effective analysis by presenting summarized visual representations of patients activities.	
Reinforcement Learning based Snake Game <i>Python, PyTorch, Reinforcement Learning</i>	GitHub
- Made an agent that learns how to play the snake game using Reinforcement Learning - Used Deep Q Learning for the agent to learn how to play snake - Implemented the game using PyGame which acts as the environment for the agent	
Auth Template <i>React, Node.js, Express, MongoDB</i>	GitHub
- Made a template for a generic quick setup of Session Based Authentication - Used Node JS, MongoDB & Express for the backend - Developed the frontend using React and the frontend library ChakraUI which implements protected routing - Added support for HTTPS testing by enabling a flag and providing the appropriate certificates	

Achievements & Extra Curricular Activities

- Runner-Up of IIIT Sri City National Healthcare Hackathon - 2023 for the web app solution - [Rhythm](#)
- E-Yantra eYIC Regional Finalist for the idea - Enabled: Connections Matter
- Reached Top 20 in Shell.ai Global Hackathon 2023 (12th Position)
- Created a npm package called 'voice-modulation' which received 100+ downloads
- VESIT Basketball Team: Participated in various Inter College Events as a part of the team
