EDUCATION

Vivekanand Education Society's Institute of Technology

B.E. Information Technology

May 2025

CGPA: 9.53

Atomic Energy Junior College-1

August 2021

HSC-Science

Percentage: 94.33

Atomic Energy Central School-2

May 2019

Higher Secondary

Percentage: 97.20

ACHIEVEMENTS

Certifications:

- (1) Python for Data Science, AI and Development  [Certificate](#)
- (2) 100 Days of Code: The Complete Python Pro Bootcamp for 2023  [Certificate](#)
- (3) Supervised Machine Learning: Regression and Classification  [Certificate](#)

SKILLS

Languages: Python, C/C++, JavaScript, HTML/CSS, Java

Frameworks: Django, React JS, Express JS, Node JS, Bootstrap, Flask

Databases: Firebase, MySQL, MongoDB

ML Libraries: Numpy, Pandas, Matplotlib, Scikit-Learn

Other tools: Git & Github, VSCode

WORK EXPERIENCE

LTIMindtree | *Project Intern*

November 2023 - January 2024

- Monitored and contributed to the development of an API utilizing generative AI, Microsoft Azure services, and C# to query the scrum process, facilitating efficient data retrieval such as identifying open projects managed by specific individuals.
- Designed and implemented a React application to present both table and summary views for the queried data, enhancing user experience and data visualization in the ScrumCopilot project.

BHABHA ATOMIC RESEARCH CENTRE | *Research Intern*

June 2024 - July 2024

- Conducting research on convolutional neural networks (CNNs) with a focus on object detection and localization using models such as YOLOv5 and RCNNs, leveraging tools like MATLAB and Python's Albumentations Library.
- Implemented and optimized object detection algorithms to automate inspection of borescope videos, identifying different internal pipe defects like Multiple Folds and White Patches with improved accuracy and efficiency.

PROJECTS

Formula One Twitter Clone | *Django, HTML, Bootstrap, VS Code*

 [Link](#)

- Implemented a social media platform with features including user profile creation, tweeting, editing tweets, and deletion.
- Developed functionality for users to follow and unfollow others.
- Explored full-stack development using Django, leveraging the built-in database system (DBSQLite) for backend operations.

Financify | *Express js, React js, Tailwind CSS, Flask, Node JS, MongoDB VS Code*

 [Link](#)

- Developed an investment suggestion system using Support Vector Machine (SVM) model, analyzing income, ROI expectations, risk tolerance, and financial literacy to recommend personalized investment options such as stocks, FDs, and mutual funds.
- Implemented a virtual currency system allowing students to earn and spend virtual coins by completing NGO-assigned tasks and posting educational videos, promoting engagement and learning.
- Integrated an expense tracking feature to help students monitor and manage their financial activities effectively.
