EDUCATION

Vivekanand Education Society's Institute of Technology <i>B.E Computer Engineering CGPA:9.02</i>	Mumbai,Maharashtra <i>Expected 2025</i>
Chatrapati Shivaji Maharaj Junior college , Jalgaon <i>HSC(Science) Grade: 95.6 %</i>	Jalgaon,Maharashtra <i>2019 - 2021</i>
Kashinath Palod Public School , Jalgaon <i>SSC Grade: 92.4 %</i>	Jalgaon,Maharashtra <i>2018 - 2019</i>

WORK EXPERIENCE

Trivia Softwares —Intern

- Contributed to the development and upkeep of the company's website.
- Developed a sophisticated management system utilizing Swing for the GUI, Hibernate Framework for Oracle Database ORM, and JFrame for charting and visualization, ensuring validation throughout the application.

PROJECTS

Congenital Heart Disease Prediction | *Python,HTML,CSS* (GitHub Link)

- Developed ANC-based method for fetal heart rate extraction from PCG signals, overcoming CTG limitations in high-risk pregnancies.
- Implemented a multistage cascaded adaptive filter system to eliminate interference from surrounding noise, utilizing sensors, filters, machine learning algorithms, and various programming tools to predict congenital heart disease using Python and trained models.
- Utilized echocardiography images for precise heart defect detection, improving diagnostic accuracy in cardiac care. Developed and hosted a website for heart defect detection using segmentation.

Student Management System | *Java, MySQL* (GitHub Link)

- Developed Java-based Student Management System integrating MySQL database for CRUD operations.
- Enhanced educational institution's data management efficiency through streamlined student information handling.
- Utilized Java and MySQL to ensure robust performance and data integrity in Student Management System.

Image Recognition | *AWS Cloud Services* (GitHub Link)

- Leveraged Amazon Rekognition to empower developers and businesses with robust image and video analysis capabilities, eliminating the need for deep expertise in machine learning or computer vision algorithms.
- Integrated AWS S3, AWS Lambda, and AWS DynamoDB to create a seamless pipeline for storing, processing, and managing multimedia data.
- Utilized Amazon Rekognition to perform advanced image and video analysis tasks such as object detection, facial recognition, and scene understanding.

Local Buddy Travel Website | *HTML,CSS,Javascript,PHP* (GitHub Link)

- Created an interactive and user-friendly platform fostering interactions, sharing tips, and experiences for travel enthusiasts and locals.
- Implemented PHP for backend functionalities, enabling seamless communication and engagement between travelers and locals on the platform.

TECHNICAL SKILLS

Languages: HTML,CSS,JavaScript,Java,Python

Database: MySQL

Tools: Git, GitHub

ACHIEVEMENTS

Participated in Syrus Hackathon Conducted by Codecell VESIT
Core and Advanced Java Course Completion Certificate
MySQL Course Completion Certificate
