Technical Skills

Languages and DataBases: MongoDB , Reactjs , Nodejs , Python , Java , MySQL , Flutter, Firebase, AWS crawler

Visualization Tools: Power BI

Other Skills: Quick learner , Attention to detail , Communication

Experience/Projects

RV Techlearn

May 2023

Trainee

Mumbai, India

- Conducted a 4-week MERN stack training program for 25 second-year college students.
- Taught the basics of MongoDB, Express.js, React, and Node.js over 12 sessions.
- Guided students through the creation of a functional website using React, with 100% completion rate.
- Fostered a comprehensive understanding of the MERN stack, resulting in successful project completions by all trainees.

MST Networks

May2024 – present

Web Developer Intern

TamilNadu, India

- Currently working as a web developer, focusing on building the frontend of the company's cybersecurity service provider website.

PNT Robotics

Apr 2023– Aug 2023

Web developer Intern

Mumbai, India

- Trained as a full stack web developer over a 6-month period.
- Completed 3 mini projects to build foundational web development skills.
- Developed an intermediate-level final project: a website using HTML, CSS, and JavaScript.
- Gained comprehensive experience in frontend and backend development, contributing to the successful completion of 1 web application.

Quantum Learnings(Microsoft Partner)

Dec 2022– Jan 2023

AIML Intern

Mumbai, India

- Developed a "House Price Predictor" project using Jupyter Notebook with Pandas, NumPy, and Matplotlib.
- Created 1 dataset and generated 7-10 heatmaps to visualize data.
- Achieved a prediction accuracy of 91% with a 50MB dataset, enhancing the reliability of the predictions.

Personal Projects/Awards & Achievements

PsyMoCare: Telepsychiatry Application | Flutter and Firebase

- Developed PsyMoCare a telepsychiatry application enabling online consultations with psychiatrists, **aiming to reduce travel costs and overcome linguistic and geographical barriers** for mental health patients. The app conducts initial assessments to determine the severity of conditions and tailors services accordingly.

E-Challan: | IoT & Blockchain

- The E-Challan website, developed with seniors and classmates, **enhances the reliability and trustworthiness of government challan systems**. It uses IoT devices in vehicles to generate e-challans and employs blockchain technology for data management, ensuring an immutable ledger without central authority. This approach contrasts with the use of mutable native databases like MongoDB.

Education

Mumbai University

July 2021– Mar 2025

Bachelor of Technology in Computer Science | Hons. Blockchain

Mumbai
