## PROJECTS

- **Fan Theories** February 2024  
**Github**
  - "Fan Theories" is an engaging web platform tailored for movie enthusiasts and avid fans to explore trailers, discuss fan theories, share opinions, and receive movie recommendations.
  - Powered by a combination of HTML, CSS, JavaScript, Node.js, Express.js, and MySQL, this dynamic project offers a multifaceted experience for users passionate about the world of cinema.
- **Suvidha Overseas Website** November 2023  
**Github**
  - The website offers detailed insights into Suvidha Overseas, featuring company details, counselor profiles, and information on various universities, aiding users in exploring study abroad options.
  - It includes testimonials and a contact form, enabling users to connect with counselors for personalized guidance and support in their study abroad journey.
- **Portfolio Website - [LINK](#)** June 2023  
**Github**
  - My portfolio website is a demonstration of my skills in HTML and CSS.
  - Easy to Navigate, user-friendly interface, clean and modern design
- **Food Management App** April 2023  
**Github**
  - Designed and developed an Android food management app using Java and XML in Android Studio
  - Empowering users to efficiently manage food resources, reduce waste, and make donations to NGOs, promoting sustainability and responsible consumption.
