🐙 github.com/adityabapat2003 | 🔗 <https://www.linkedin.com/in/aditya-bapat-763620151/>

Skills

Languages: C,C++, Java, Python, JavaScript, SQL

Technologies/Frameworks: ReactJs, NextJs, NodeJs, ExpressJs, TypeScript, SpringBoot, WebSockets

Tools: Docker, Github, MongoDB,MS SQL Server, Kafka

Machine Learning and Data Analysis: TensorFlow, PyTorch, scikit-learn ,Pandas, NumPy, Matplotlib, PowerBi

Familiar: Kubernetes , Grunt , Jira , Tableau, AWS

Education

Vivekanand Education Society's Institute of Technology

Dec 2021 - Jun 2025

Bachelor of Engineering in Electronics and Telecommunication Engineering with Honors in AI/ML

CGPA of 9.25

Involvement: Indian Society for Technical Education (SE Technical Officer)

Projects

Video Conferencing App using SpringBoot and Zegocloud

- Developed a real-time video conferencing application using Zegocloud and Spring Boot.
- The front-end was built with JavaScript, HTML, and CSS, facilitating seamless user interactions.
- This project highlights Zegocloud for real-time communication and Spring Boot for backend services.

Stock data analysis using Kafka and Power Bi

- Developed a stock data analysis system leveraging Apache Kafka for efficient data streaming and processing.
- Implemented robust data pipelines to ingest, analyze, and query stock market trends in real-time, providing actionable insights and enhancing decision-making processes.
- Visualized the data using Power Bi to identify trends and patterns in the data.

Stable Diffusion Model from scratch in pytorch

- Implemented a Stable Diffusion model from scratch using PyTorch to generate images based on text prompts.
- Implemented key components of the architecture, including encoders, decoders, Network, scheduler, and an integrated pipeline for connecting them.
- PyTorch, Python, Deep Learning, Generative Models, Neural Networks.

Meet-Wave

- Developed a robust video conferencing application: Built using Next.js, offering real-time audio and video communication, secure user authentication, and a suite of collaboration features.
- Implemented diverse functionalities: Real-time communication, user authentication, interactive UI, chat functionality, screen sharing, screen recording and downloading, meeting scheduling, and more.

Peek Rakshak

- Developed an integrated hardware and software solution for crop monitoring and protection: Utilized Raspberry Pi 3B with TinyML for real-time animal recognition to prevent crop damage.
- Implemented crop and fertilizer recommendation systems based on soil and environmental parameters using machine learning algorithms and developed a leaf disease detection module using CNN having 98 percent accuracy.
- This project showcases IoT, machine learning, and agricultural technology to enhance farming practices and crop management.

Certificates

- **Machine Learning with Python | IBM**
- **Advanced Learning Algorithms | DeepLearning.AI**
- **Introduction to Cloud Computing | IBM**
- **Java Programming : Solving problems with software | Duke University**
